Remote Control System

Cyber intelligence made easy

Is passive
monitoring
enough?

Sensitive data is often exchanged using encrypted channels. Most of it never goes on the net. Sometimes your target is even outside your monitoring domain. You need something more.

Deploy
a secret
agent.

Remote Control System is a stealth **investigative tool** dedicated to law enforcement and security agencies for digital investigations. It is an eavesdropping software which hides itself inside the target devices. It enables both active data monitoring and process control.

Go stealth
and
untraceable.

Remote Control System is totally **invisible** to the target. Our software bypasses protection systems such as antivirus, antispyware and personal firewalls.

Defeat
encryption and
acquire **relevant**
data.

Remote Control System gathers a variety of **information** from target devices.

Encrypted voice

Relationships

Target location

Web browsing

Messaging

Audio & Video Spy

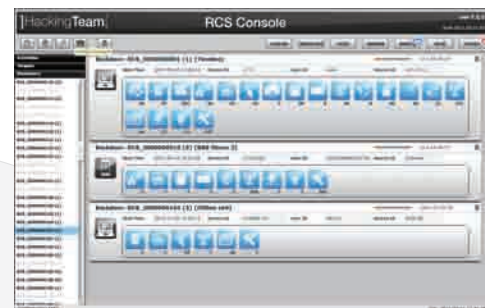

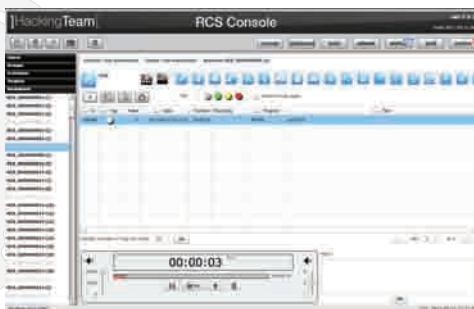

Hit
your **target.**

Attack your target either remotely or locally using several installation vectors. Do that while the target is browsing the internet, opening a document file, receiving an SMS or crossing the borders with his laptop.

Monitor a hundred thousand targets.

Remote Control System can monitor from a few and up to hundreds of thousands of targets. The whole system can be managed by a single **easy to use** interface that simplifies day by day investigation activities.

Runs everywhere.

Remote Control System can be deployed on any platform.

symbian

BlackBerry

Rely on us.

HackingTeam provides a comprehensive training on the product and on advanced attack techniques.

A **team of experts** is always ready to answer all customer requests via our online support system.

Remote Control System is developed by Hacking Team and used **worldwide** for national security issues.
