Glossary

The terms and their definitions used in this manual are provided below.

A

**Accounting**
Console section that manages RCS access.

**acquisition sequence**
Group of complex events, actions and acquisition modules that make up the advanced agent configuration.

**Administrator**
The person who enables user access to the system, creates work groups and defines operations, targets and the type of data to be collected.

**Agent**
Software probes installed on devices to monitor. They are designed to collect evidence and communicate it to the Collector.

**alert rules**
Rules that create alerts when new evidence is stored or agents communicate back for the first time.

**Alerting**
Console section that manages new evidence alerts.

**alerting group**
Group of users who receive notifications via mail whenever a system alarm is triggered (for example, when the database exceeds available free space limits). Normally this group is not linked to an operation.

**Analyst**
Person in charge of analyzing the data collected during operations.

**Anonymizer**
(optional) Protects the server against external attacks and permits anonymity during investigations. Transfers agent data to Collectors.
Audit
Consoel section that reports all users' and system actions. Used to monitor abuse of RCS.

B
back end
Environment designed to decrypt and save collected information. In distributed architecture, it includes Master Node and Shard databases.

BRAS
(Broadband Remote Access Server) routes traffic to/from DSLAM to the ISP network and provides authentication to the ISP subscribers.

C
Collector
Receives data sent by agents directly or through the Anonymizer chain.

console
Computer on which the RCS Console is installed. It directly accesses the RCS Server or Master Node.

D
Dashboard
Console section used by the Analyst. Used to have a quick overview of the status of the most important operations, targets and agents.

DSLAM
(Digital Subscriber Line Access Multiplexer) network device, often located in the telephone exchanges of the telecommunications operators. It connects multiple customer digital subscriber line (DSL) interfaces to a high-speed digital communications channel using multiplexing techniques.

E
evidence
Collected data evidence. The format depends on the type of evidence (i.e.: image).
evidence alerts
Alerts, usually in the form of emails, sent to analysts when new evidence matches the set rule.

F

factory
A template for agent configuration and compiling.

front end
Environment designed to communicate with agents to collect information and set their configurations. In distributed architecture, it includes the Collector and Network Controller.

I

injection rules
Settings that define how to identify HTTP traffic, what resource should be injected and what method is to be used for the injection.

M

Monitor
Console section that monitors components and license status.

N

Network Controller
Component that checks Network Injector and Anonymizer status and sends them new configurations and software updates.

Network Injector
Hardware component that monitors the target’s network traffic and injects an agent into selected Web resources. It comes in two versions, Appliance or Tactical: the former is for deployment at the ISP, the latter for use on the field.

Network Injector Appliance
Rackable version of the Network Injector, for installation at ISP. See: Tactical Network Injector.
**O**

**operation**
Investigation aimed at one or more targets, whose devices will be recipients for agents.

**R**

**RCS**
(Remote Control System) the product documented hereto.

**RCS Console**
Software designed to interact with the RCS Server.

**RCS Server**
One or more computers, based on the installation architecture, were essential RCS components are installed: Shard databases, Network Controllers and Collector.

**S**

**SSH**
(Secure SHell) a network protocol for secure data communication, remote shell services or command execution.

**System**
Console section that manages the system.

**System administrator**
The person who installs the servers and consoles, updates software and restores data in case of faults.

**T**

**Tactical Network Injector**
The portable version of Network Injector, for tactical use. See: Network Injector Appliance.
TAP
(Test Access Port) a hardware device installed in a network that passively monitors the transmitted data flow.

target
The physical person under investigation.

Technician
The person assigned by the Administrator to create and manage agents.

V

VPS
(Virtual Private Server) a remote server where the Anonymizer is installed. Commonly available for rent.
Guide introduction

Presentation

Manual goals

This manual is a guide for the System Administrator to:

- correctly install the RCS system and its components
- set up components using the administration console
- understand and resolve any system problems

Information on how to consult the manual is provided below.

Print concepts for notes

Notes foreseen in this document are listed below (Microsoft Manual of Style):

**WARNING:** indicates a risky situation which, if not avoided, could cause user injury or equipment damages.

**CAUTION:** indicates a risky situation which, if not avoided, can cause data to be lost.

**IMPORTANT:** offers the indications required to complete the task. While notes can be neglected and do not influence task completion, important indications should not be neglected.

**NOTE:** neutral and positive information that emphasize or add information to the main text. They provide information that can only be applied in special cases.

**Tip:** suggestion for the application of techniques and procedures described in the text according to special needs. It may suggest an alternative method and is not essential to text comprehension.

**Service call:** the operation may only be completed with the help of technical service.

Print concepts for format

A key to print concepts is provided below:

<table>
<thead>
<tr>
<th>Example</th>
<th>Style</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>See &quot;User data&quot;</td>
<td><em>italic</em></td>
<td>this indicates a chapter, section, sub-section, paragraph, table or illustration heading in this manual or other publication of reference.</td>
</tr>
</tbody>
</table>
Example | Style | Description
--- | --- | ---
<ddmmyyyy> | <aaa> | indicates text that must be specified by the user according to a certain syntax. In the example <ddmmyyyy> is a date and could be “14072011”.

Select one of the listed servers [2]. 
Click **Add**. Select the File menu, **Save data**. 
Press **ENTER** **UPPER CASE** indicates the name of keyboard keys.

See: Network Injector Appliance. 
- suggests you compare the definition of a word in the glossary or content with another word or content.

### Product and guide addressees

Following is the list of professionals that interact with RCS.

<table>
<thead>
<tr>
<th>Addressee</th>
<th>Activity</th>
<th>Skills</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>System administrator</strong></td>
<td>Follows the HackingTeam’s instructions provided during the contract phase. Installs and updates RCS servers, Network Injectors and RCS Consoles. Schedules and manages backups. Restores backups if servers are replaced.</td>
<td><strong>Expert network technician</strong></td>
</tr>
<tr>
<td><strong>WARNING:</strong> the system administrator must have the required necessary skills. The HackingTeam is not liable for equipment malfunctions or damages due to unprofessional installation.</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>Administrator</strong></td>
<td>Creates authorized accounts and groups. Creates operations and target. Monitors system and license status.</td>
<td><strong>Investigation manager</strong></td>
</tr>
<tr>

RCS (Remote Control System)

Presentation

Introduction

RCS (Remote Control System) is a solution that supports investigations by actively and passively tapping data and information from the devices targeted by the investigations. In fact, RCS anonymously creates, sets and installs software agents that collect data and information, sending the results to the central database to be decrypted and saved.

Content

This section includes the following topics:

- All-in-One architecture components ................................................................. 7
- Distributed architecture components ................................................................. 9
- What you should know about RCS .................................................................. 10
- Differences with previous versions .................................................................... 11
All-in-One architecture components

Introduction
RCS is installed at the operating center and proprietary authority’s tapping rooms. It can come with special devices (hardware and software) installed at remote organizations such as Internet providers or remote servers. RCS can be installed in All-In-One or Distributed architecture.

All-In-One architecture layout
All-in-One architecture includes RCS installed on a single server. The logical architecture layout is provided below:

![All-In-One RCS architecture: logical layout](image)

All-in-One RCS architecture components
Architecture components are provided below:
<table>
<thead>
<tr>
<th>Component</th>
<th>Function</th>
<th>Installation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Agent</td>
<td>Software bugs tap and communicate the investigation target's data and information to an Anonymizer or, if not installed, directly to Collectors.</td>
<td>• target devices&lt;br&gt;• data sources</td>
</tr>
<tr>
<td>Anonymizing chain</td>
<td>(optional) geographically distributed Anonymizer groups that guarantee Collector anonymity and redirect collected data to protect servers from remote attacks. It transfers agent data to servers. Several Anonymizers can be set up in a chain to increase the level of protection. Each chain leads to one Collector.</td>
<td>VPS (Virtual Private Server)</td>
</tr>
<tr>
<td>Anonymizer</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Collector</td>
<td>RCS server component that collects agent data either directly or through the Anonymizer chain.</td>
<td>RCS server</td>
</tr>
<tr>
<td>Firewall</td>
<td>Optional but highly recommended, it protects the trusted environment were data is processed and saved from the untrusted environment where data is collected.</td>
<td>RCS server</td>
</tr>
<tr>
<td>RCS console</td>
<td>Setup, monitoring and analysis console used by operating center workers.</td>
<td>• RCS server&lt;br&gt;• internal network</td>
</tr>
<tr>
<td>Master Node</td>
<td>Heart of the RCS server, it manages data flows, component status and includes the first Shard database. It includes the Worker service to decode data before saving it in the database.</td>
<td>RCS server</td>
</tr>
<tr>
<td>Network Controller</td>
<td>(optional) RCS server component, sends settings to Network Injector, Anonymizer chains and constantly acquires their status.</td>
<td>RCS server</td>
</tr>
<tr>
<td>Network Injector</td>
<td>(optional) Fixed hardware component (Appliance) or notebook (Tactical), it runs sniffing and injection operations on the target's HTTP connections.</td>
<td>• ISP&lt;br&gt;• Wired or Wireless LAN (homes, hotel)</td>
</tr>
<tr>
<td>Target</td>
<td>Investigation targets. Each device owned by the target is a data source and can be monitored by an agent.</td>
<td></td>
</tr>
</tbody>
</table>
Distributed architecture components

Introduction
In special cases, RCS can also be installed in *distributed* architecture.

Distributed architecture layout
Software components are installed on several servers in distributed architecture. The architecture layout is provided below:

![Distributed RCS architecture: logical layout](image)

**Figure 1:** Distributed RCS architecture: logical layout

Distributed architecture components
Following are the difference in components in distributed architecture compared to All-in-One architecture:
### Component | Function | Installation
--- | --- | ---
**Collector** | One per each Anonymizing Chain, it collects data communicated by the last Anonymizer in the chain. It requires a single license. | one or more servers in front end environment
**Network Controller** | One per architecture, it is included in first Collector installation. | one server in front end environment
**Shard x** | Additional RCS distributed database partitions. Shard 0 is included in Master Node. It includes Worker service to decode data and enter it in the database. | one or more servers in back end environment

## What you should know about RCS

**Operations**
RCS system components must be suitably installed at both the operating center and, eventually, an Internet service provider. Typically divided in *front end* environments for all data collection, tapping and monitoring, and *back end* environment for data collection and backup.

**Data flow and protection**
The RCS server clearly separates activities in *untrusted* environment from those in *trusted* environment. The barrier limit is provided by a resident firewall.
Tapping data is collected in untrusted environment, eventually redirected to protect the addressee’s identity (you) and sent to an information collector (Collector). Remote device status and settings are checked by a specific component (Network Controller).
In trusted environment, evidence is managed, set and monitored (Master Node).
Lastly, RCS Console is a client that directly connects to Master Node. It can be installed on any computer to be used by the various RCS users.
*See "Distributed architecture components" on previous page.*

**Data logging continuity**
Agents send collected data to the Collector. If communications fail, connectivity is down or the Collector does not work, agents can save a set amount of data until connectivity is restored. Data that exceed the admitted limit are lost.
If the Collector cannot communicate with Master Node (disservice or maintenance in progress), received data is locally saved on the Collector until Master Node is restored. Once restored, data is automatically sent.
Redirecting login to Collector
The Collectors real function can be hidden, for direct access to data collection service, by redirecting to an unsuspicious page (i.e.: Google, e-commerce site and so on). Redirecting is through a customizable HTML page.
See "Files installed at the end of installation" on page 35

Digital certificates
Master Node uses HTTPS digital certificates that guarantee communication security between Master Node, Collector, Network Controller and RCS Consoles.
Some agents (Android, Symbian) require specific certificates that must be created and saved in folder \RCS\DB\config\certs.
See "Files installed at the end of installation" on page 35

Decoding data
Worker service is installed with each Shard and decodes data before it is saved in the database.
For distributed databases, each Shard has its own Worker that receives encrypted data from Master Node, decodes it and saves it in the database. The work load is automatically evenly distributed among all Shards in the same cluster.

Differences with previous versions
Differences with the RCS 7.6 version are described below

Installation introduction

Presentation

Introduction

RCS installation is run at first installation or subsequent updates. Installation files are available on the CD included in the package or can be downloaded from the HackingTeam support portal.

Installation requirements

All hardware must already be installed and running according to the system requirements communicated by HackingTeam upon order confirmation.

See "Minimum system requirements" on page 14

NOTE: Network Injector or Anonymizer installation is optional and will be documented in the following chapters.

Content

This section includes the following topics:

- Package content ................................................................. 13
- Minimum system requirements .............................................. 14
- Ports to be opened on the firewall ........................................... 14
- System administrator procedures .......................................... 15
Package content

RCS is supplied in a package that includes:

- an installation CD
- a USB key with user license
- two USB hardware keys (main and backup)

⚠️ Service call: all USB keys are supplied with an ID code that must be communicated to support service for all software replacements and updates.

Installation package content (CD or web)

The installation package in the CD or downloaded from the HackingTeam support portal contains the following files where 'x' is the CD root:

<table>
<thead>
<tr>
<th>Folder</th>
<th>Included files</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>x:</td>

</table>

USB key with user license

The package contains a USB key with the user license for the supplied RCS version. The file is required for installation and software updates. It can be copied from the USB key to any other support device.
USB hardware keys

Two hardware keys are included in the package: a main one, already linked to the license in the USB license key, and a backup, ready to be activated in the event the main key fails.

**IMPORTANT:** the hardware key must always be connected to the server (to Master Node in distributed architecture) to allow all RCS services to run. All services are immediately aborted when the key is disconnected!

Minimum system requirements

Hardware must be configured as instructed by support service in the contract phase. The computers on which RCS is installed require the following characteristics:

<table>
<thead>
<tr>
<th>Machine</th>
<th>Component</th>
<th>Requirement</th>
</tr>
</thead>
<tbody>
<tr>
<td>Front end and back end server</td>
<td>Operating system</td>
<td>Microsoft Windows Server 2008 R2 Standard (English)</td>
</tr>
<tr>
<td>Computer for RCS Console</td>
<td>Operating system</td>
<td>Microsoft Windows or Apple Mac OS X.</td>
</tr>
<tr>
<td>Computer for RCS Console</td>
<td>Browser</td>
<td>Firefox 11, IE 9, Chrome</td>
</tr>
<tr>
<td>VPS for Anonymizer</td>
<td>Operating system</td>
<td>Linux CentOS 6</td>
</tr>
<tr>
<td>Network Injector (Appliance or Tactical)</td>
<td>Operating system</td>
<td>Provided by HackingTeam</td>
</tr>
</tbody>
</table>

Ports to be opened on the firewall

If a firewall is installed between RCS server components, the following TCP ports must be opened to allow services to communicate:

<table>
<thead>
<tr>
<th>From...</th>
<th>To...</th>
<th>Port to be opened</th>
</tr>
</thead>
<tbody>
<tr>
<td>Agent/Anonymizer</td>
<td>Collector</td>
<td>80</td>
</tr>
<tr>
<td>Collector</td>
<td>Master Node</td>
<td>443</td>
</tr>
<tr>
<td>Collector</td>
<td>remote</td>
<td>all</td>
</tr>
<tr>
<td>Master Node</td>
<td>Collector</td>
<td>80</td>
</tr>
</tbody>
</table>
System administrator procedures

Introduction
Typical System administrator procedures are listed below with references to the pertinent chapters.

Procedures

Install RCS and setup components
The server, Console, Shard, additional Collector and optional Anonymizer and Network Injector component installation procedure is described below:

Step  Action

1  Prepare the installation environment.  
   See "Installation introduction" on page 12.
2  Install the RCS server (in All-In-One or distributed architecture).  
   See "RCS installation" on page 17.
3  Install the RCS Consoles.  
   See "RCS Console installation " on page 30.
4  (optional) Install an OCR module.  
   See "OCR module installation" on page 33
5  (optional) Install the Shard databases and additional Collectors.  
   See "Additional component installation in distributed architecture" on page 52.
6  (optional) Install and setup up Anonymizers.  
   See "Anonymizer installation and settings" on page 38
7  (optional) Install Network Injectors.  
   See "What you should know about Network Injector Appliance" on page 40.  
   See "What you should know about Tactical Network Injector" on page 45.
Maintain and update the system
References to the chapters on how to maintain performance and update the system are listed below:

- See "Routine maintenance and software updates" on page 59 .
- See "Editing Master Node and Collector settings" on page 64 .
- See "Troubleshooting" on page 69 .

Monitoring the system
References to chapters on how to monitor the system are given below:

- See "RCS Console for the System administrator" on page 79
RCS installation

Presentation

Introduction

RCS installation requires intervention on various local and remote servers.

What you should know about RCS installation

Login privileges
RCS was designed to guarantee maximum server and collected data security. To achieve this goal, four distinct roles were defined that usually refer to the professionals who can login to the system:

- 👤 System administrator: exclusively in charge of hardware and software installation and backups
- ⭐ Administrator: in charge of all system login, investigations and investigation goals
- ⚒ Technician: in charge of setting up and installing tapping agents
- 📘 Analyst: in charge of data analysis

Tip: several roles can be assigned to the same user, for example, an Administrator can also have Technician privileges.

Admin user and System administrator user
A special user is created during installation with the name "admin" and all privileges (system administrator, administrator, technician and analyst) to be used for all RCS Console settings and login functions.

This user must only be used for this purpose. After completing installation, we recommend you create one or more users with the required privileges according to your organization.

⚠️ IMPORTANT: we usually refer to the admin user in this manual as the System Administrator, even if she/he has all privileges.

RCS server installation in All-in-One architecture

Introduction
RCS server installation in All-in-One architecture installs all server components on the same computer.

The RCS Console will be installed with a separate procedure.

See "RCS Console installation " on page 30

Installation requirements
The following is required before installing RCS server(s):

- the name or IP address of the server(s) where RCS is to be installed
- the license file, found on the USB key supplied in the delivered package or other support if downloaded from Internet.
- the USB hardware key, supplied in the package.
• for firewall, open the ports for correct service operations. See "Ports to be opened on the firewall" on page 14.

Installation sequence
The complete installation procedure for All-in-One architecture is described below:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
<th>Machine</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Prepare that indicated in installation requirements.</td>
<td>-</td>
</tr>
<tr>
<td>2</td>
<td>Install RCS.</td>
<td>server</td>
</tr>
<tr>
<td>3</td>
<td>Make sure services have started.</td>
<td>server</td>
</tr>
<tr>
<td>4</td>
<td>Check the installation log.</td>
<td>server</td>
</tr>
<tr>
<td>5</td>
<td>Install RCS Console.</td>
<td>server or other computer</td>
</tr>
<tr>
<td>6</td>
<td>Setup the backup folder on the remote unit.</td>
<td>server</td>
</tr>
</tbody>
</table>

Installation
To install the server in All-in-One architecture:

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Insert the hardware key.</td>
</tr>
<tr>
<td>2.</td>
<td>Insert the CD with the installation package. Run file RCS&lt;version&gt;.exe in folder x:\setup the first wizard window appears. Click Next.</td>
</tr>
</tbody>
</table>
4. Select **All-in-One**.
5. Click **Next**.

6. Enter the server name or IP address where the software is being installed and that will be indicated at RCS Console login (i.e.: RCSserver).

   **IMPORTANT:** the name and/or IP address must be univocal.

7. Click **Next**.
### Steps

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>8. Select the license file.</td>
<td><img src="image" alt="RCS Setup" /></td>
</tr>
<tr>
<td>9. Click <strong>Next</strong>.</td>
<td></td>
</tr>
<tr>
<td>10. Enter the system administrator’s password.</td>
<td></td>
</tr>
<tr>
<td>11. Click <strong>Next</strong>: installation is launched.</td>
<td></td>
</tr>
</tbody>
</table>

**NOTE:** if the server name or IP address needs to be changed after installation due to faults see "*Editing Master Node settings*" on page 66.

### Checking service start

Make sure all RCS services are up and running. If services are not running, manually start them. See "*List of started RCS services*" on page 29.

### Checking installation logs

If errors occur during installation, check logs and send them to support service if necessary. See "*System logs*" on page 71.

### Check IP addresses

To check addresses, open RCS Console, **System** section, **Frontend**: the server address appears on the screen (Collector). See "*Anonymizer installation and settings*" on page 38.

### Uninstall

RCS can be uninstalled from the Windows Control Panel.

**CAUTION:** All saved data is lost when the RCS server is uninstalled. For correct operations, backup data. See "*Backup management*" on page 91.
RCS server installation in distributed architecture

Introduction
Installation in distributed architecture typically installs all components on two or more servers: one server for the front end environment to collect data and manage remote devices and one server for the back end environment to process and save data.

Service call: distributed architecture is scalable. Check with the HackingTeam support service.

NOTE: RCS Console will be installed with a separate procedure on either the same server or other remote computer.

Installation requirements
The following is required before installing RCS server(s):

- the name or IP address of the server(s) where RCS is to be installed
- the license file, found on the USB key supplied in the delivered package or other support if downloaded from Internet.
- the USB hardware key, supplied in the package.
- for firewall, open the ports for correct service operations. See "Ports to be opened on the firewall" on page 14.

Installation sequence
The installation sequence in distributed architecture is described below:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
<th>Machine</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Prepare that indicated in installation requirements.</td>
<td>-</td>
</tr>
<tr>
<td>2</td>
<td>Install Master Node.</td>
<td>server in back end environment</td>
</tr>
<tr>
<td>3</td>
<td>Check installation logs.</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Make sure Master Node services have started.</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>Install Collector and Network Controller.</td>
<td>server in front end environment</td>
</tr>
<tr>
<td>6</td>
<td>Check installation logs.</td>
<td></td>
</tr>
<tr>
<td>7</td>
<td>Check Collector redirecting</td>
<td>same server or other computer</td>
</tr>
<tr>
<td>8</td>
<td>Install RCS Console.</td>
<td>server in back end environment or other computer</td>
</tr>
<tr>
<td>9</td>
<td>Setup the backup folder on the remote unit.</td>
<td>server in back end environment</td>
</tr>
</tbody>
</table>
**Master Node installation**

To install Master Node on the server in back end environment:

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Insert the hardware key.</td>
<td>-</td>
</tr>
<tr>
<td>2. Insert the CD with the installation package. Run file RCS-&lt;version&gt;.exe in folder x:\setup: the first wizard window appears.</td>
<td></td>
</tr>
<tr>
<td>3. Click Next.</td>
<td><img src="image1.png" alt="Wizard Window" /></td>
</tr>
<tr>
<td>4. Select Distributed.</td>
<td><img src="image2.png" alt="Wizard Window" /></td>
</tr>
<tr>
<td>5. Click Next.</td>
<td></td>
</tr>
</tbody>
</table>
### Steps

1. Select **Master Node**.
2. Click **Next**.

### Result

8. Enter the server name or IP address where the software is being installed and that will be indicated at RCS Console login (i.e.: RCSMasterNode).

   **IMPORTANT:** the name and/or IP address must be univocal.

9. Click **Next**.
### RCS 8.2 - Collector and Network Controller installation

#### Steps | Result
---|---
10. Select the license file. | ![License File Selection](image)
11. Click **Next**. |  
12. Enter the system administrator’s password. |  
13. Click **Next**: when installation has completed, services are started and are ready to receive data and communicate with the RCS Console. |  

**NOTE:** if the server name or IP address needs to be changed after installation due to faults see "Editing Master Node settings" on page 66.

---

#### Collector and Network Controller installation

To install Collector(s) and Network Controller(s) in front end environment:

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Insert the hardware key.</td>
<td>-</td>
</tr>
<tr>
<td>Steps</td>
<td>Result</td>
</tr>
<tr>
<td>-------</td>
<td>--------</td>
</tr>
</tbody>
</table>
| 2. Insert the CD with the installation package. Run file RCS-<version>.exe in folder x:\setup: the first wizard window appears. | ![Welcome to the RCS Setup Wizard](https://via.placeholder.com/150)
This wizard will guide you through the installation of RCS. It is recommended that you close all other applications before starting Setup. This will make it possible to update relevant system files without having to reboot your computer. Click Next to continue. |
| 3. Click Next. | ![Installation Type](https://via.placeholder.com/150)
Please select the installation type you want:
- **All-in-one**
  - All the components will be installed on a single machine. Easy setup for small deployments.
- **Distributed**
  - The installation is fully customizable. Each component can be installed on different machine to achieve maximum scalability. Suggested for big deployments. |
| 4. Select **Distributed**. | ![Installation Type](https://via.placeholder.com/150)
Please select the installation type you want:
- **All-in-one**
  - All the components will be installed on a single machine. Easy setup for small deployments.
- **Distributed**
  - The installation is fully customizable. Each component can be installed on different machine to achieve maximum scalability. Suggested for big deployments. |
| 5. Click **Next**. | ![Installation Type](https://via.placeholder.com/150)
Please select the installation type you want:
- **All-in-one**
  - All the components will be installed on a single machine. Easy setup for small deployments.
- **Distributed**
  - The installation is fully customizable. Each component can be installed on different machine to achieve maximum scalability. Suggested for big deployments. |
<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>6. Select <strong>Collector</strong> and <strong>Network Controller</strong>.</td>
<td>![Image of Setup screen showing Collector and Network Controller selection]</td>
</tr>
<tr>
<td>7. Click <strong>Next</strong>.</td>
<td></td>
</tr>
<tr>
<td>8. Enter the system administrator password indicated in Master Node installation.</td>
<td>![Image of Setup screen showing password input]</td>
</tr>
<tr>
<td>9. Click <strong>Next</strong>: installation is launched.</td>
<td></td>
</tr>
</tbody>
</table>
### Steps

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>10. Enter the Master Node server name or IP address (i.e.: RCSMasterNode).</td>
<td></td>
</tr>
<tr>
<td>11. Click Install: when installation has completed, services start and attempt to communicate with Master Node. The server in back end environment is protected and any remote login is redirected.</td>
<td></td>
</tr>
</tbody>
</table>

### Checking service start

Make sure all RCS services are up and running. If services are not running, manually start them. See "List of started RCS services" on the facing page.

### Checking Collector redirecting

To check whether Collector installation was successfully completed:

<table>
<thead>
<tr>
<th>If</th>
<th>Then</th>
</tr>
</thead>
<tbody>
<tr>
<td>on the server</td>
<td>- open a browser</td>
</tr>
<tr>
<td></td>
<td>- enter localhost</td>
</tr>
<tr>
<td></td>
<td>- <strong>Result:</strong> the browser must be redirected to Google.</td>
</tr>
<tr>
<td>on another computer</td>
<td>- open a browser</td>
</tr>
<tr>
<td></td>
<td>- enter http://&lt;front end server name or IP address&gt;</td>
</tr>
<tr>
<td></td>
<td>- <strong>Result:</strong> the browser must be redirected to Google.</td>
</tr>
</tbody>
</table>

⚠️ Tip: you can edit redirecting or create a custom page. To do this, edit page decoy.html. See "Files installed at the end of installation" on page 35

### Checking installation logs

If errors occur during installation, check logs and send them to support service if necessary. See "System logs" on page 71
Check IP addresses

To check all addresses, start the RCS Console, **System** section, **Frontend**: Collector addresses appear on the screen. See "Anonymizer installation and settings" on page 38.

Uninstall

RCS can be uninstalled from the Windows Control Panel.

⚠️ **CAUTION:** All saved data is lost when Master Node is uninstalled. For correct operations, backup data. See "Backup management" on page 91.

ℹ️ **NOTE:** data will not be lost when other servers are uninstalled.

List of started RCS services

RCS services appear at the end of the various installation phases. Making sure they have correctly started is one of the procedures required to ensure installation is complete.

Services are listed below:

<table>
<thead>
<tr>
<th>Architecture</th>
<th>Services</th>
<th>Server in environment</th>
</tr>
</thead>
<tbody>
<tr>
<td>All-in-One</td>
<td>RCSMasterConfig</td>
<td>back end</td>
</tr>
<tr>
<td></td>
<td>RCSMasterRouter</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSMasterShard</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSMasterWorker</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSMasterDb</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSCollector</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSDB</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mongodb</td>
<td></td>
</tr>
<tr>
<td>Distributed</td>
<td>RCSCollector</td>
<td>front end</td>
</tr>
<tr>
<td></td>
<td>RCSMasterConfig</td>
<td>back end only with Master Node</td>
</tr>
<tr>
<td></td>
<td>RCSMasterRouter</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSMasterShard</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSMasterWorker</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSMasterDb</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSDB</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Mongodb</td>
<td></td>
</tr>
<tr>
<td></td>
<td>RCSWorker</td>
<td>back end with additional Shards</td>
</tr>
<tr>
<td></td>
<td>RCSShard</td>
<td></td>
</tr>
</tbody>
</table>
NOTE: Network Controller does not appear amongst services since it is a RCSCollector service setting.

To learn more

To restart any stopped services see "Service restart procedures" on page 74.

RCS Console installation

Introduction
RCS Console is a client designed to interact with Master Node. It is typically installed on control room computers (for inspectors and analysts) and used by all personnel involved in RCS installation.

NOTE: for All-in-One architecture you can also install an RCS Console on the RCS server.

Requirements
Before installing RCS Console you must:

If you are installing.. Then you must...

| RCS All-in-One                                                                 | • have the RCS server installed  
|                                                                             | • prepare the server name or IP address  
|                                                                             | • prepare the system administrator's password.  
| Distributed RCS                                                              | • have the RCS server(s) installed  
|                                                                             | • prepare the Master Node name or IP address  
|                                                                             | • prepare the Master Node System administrator's password  

Installation sequence
The full RCS Console installation sequence is the following:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Install Adobe AIR.</td>
</tr>
<tr>
<td>2</td>
<td>Install RCS Console.</td>
</tr>
</tbody>
</table>

Adobe AIR installation
To install Adobe AIR:
### Steps

<table>
<thead>
<tr>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Install Adobe AIR: no icon appears on the desktop at the end of installation.</td>
</tr>
</tbody>
</table>

### RCS Console installation

To install RCS Console:

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Run the file RCSconsole-&lt;version&gt;.air</td>
<td></td>
</tr>
<tr>
<td>2. Click Install.</td>
<td></td>
</tr>
</tbody>
</table>
### Steps

3. Set any preferences.

4. Click **Continue**: RCS Console will be installed on the computer.

<table>
<thead>
<tr>
<th><strong>Result</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1.png" alt="Installation Application" /></td>
</tr>
</tbody>
</table>

5. The RCS Console login window appears at the end of installation.

6. Enter your credentials and the server name/IP address.

7. Click ![Info Icon](image2.png)  
   NOTE: the System administrator logs in with name "admin" and the password selected during installation.

### RCS Console uninstall

RCS Console can be uninstalled at any time, for example, to use the computer in another way or to remove RCS Console from the All-in-One server and install it on a separate computer. Database data and user preferences are not influenced in any way.

### Creating the Administrator user

An RCS Console Administrator user must be created during RCS installation. The Administrator is in charge of creating all other users and managing operations and targets. See "Product and guide addressees" on page 4.

To create an Administrator user:

**Step**  **Action**

1. From RCS Console, in the Accounting section, click New user.

2. Enter the required data, selecting the Administrator role and click Save: the new user appears in the main work area with icon. From now on the user with the indicated credential can log into RCS Console and run the foreseen functions.

**OCR module installation**

**Introduction**

The OCR module is an optional module that converts all images acquired by the agent as screenshots into tagged text for full-text searches.

**NOTE:** it supports only ASCII characters and left to right reading.

**Installation requirements**

For all-in-one architecture, install the module on Master Node.

For distributed architecture, install the first OCR module on Shard to avoid increasing the Master Node work load.

**OCR module operations**

OCR module operations are described below:

<table>
<thead>
<tr>
<th>Phase</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Screenshot evidence images, awaiting conversion, are saved in a separate queue from evidence awaiting analysis.</td>
</tr>
<tr>
<td>2</td>
<td>The OCR module read the image queue and converts it into text. This operation can last from one to 5-10 seconds according to the number of words to be acquired.</td>
</tr>
<tr>
<td>3</td>
<td>Each image text is saved in the database and tagged as full-text.</td>
</tr>
<tr>
<td>4</td>
<td>Storage times and tags for the single image are saved in the module log.</td>
</tr>
<tr>
<td>5</td>
<td>The text is made available to the Analyst in the page with the list of evidence for a search in the Info field and in the detailed evidence page.</td>
</tr>
</tbody>
</table>
Space occupied by tagged text in the database
Each piece of screenshot evidence occupies more space in the database because it is always accompanied by its tagged text. The increase in space cannot be predicted since it depends on both the number of screenshots acquired from the agent and the number of words in each screenshot.

OCR module work load
The OCR module occupies a lot of the CPU when converting a screenshot, but is run with a lower priority than other processes. Thus the CPU load will only have an effect when the system shows the converted image text during evidence analysis.
For distributed architecture, it can be installed on Shard and not on the Master Node, already full of processes.

Symptoms of excessive load
Check how long it takes for the text to be displayed in the single evidence detail and check the times recorded in the log when acquiring images. If these are deemed excessive and another server is free (i.e.: that housing another shard database or Master Node) install another OCR module.
This way the work load will be divided amongst all installed modules.

OCR module installation
To install an OCR module in back end environment:

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Insert the CD with the installation package. Run file RCS-ocr-&lt;version&gt;.exe in folder x:\setup: the first wizard window appears.</td>
<td><img src="image" alt="RCS-OCR Setup" /></td>
</tr>
<tr>
<td>2. Click <strong>Next</strong>.</td>
<td></td>
</tr>
</tbody>
</table>

"Welcome to the RCS-OCR Setup Wizard"

The wizard will guide you through the installation of RCS-OCR.
It is recommended that you close all other applications before starting Setup. This will make it possible to update relevant system files without having to reboot your computer.
Click install to start the installation.

[Install] [Cancel]

System Administrator's Guide | ver.1.2 OCT-2012 | RCS 8.2 | 2012© HT S.r.l. - p. 34
Steps | Result
--- | ---
3. Follow the steps below until installation has completed: the module will begin converting images the first time a screenshot type of evidence is received.

Checking correct OCR module operations

To check whether image conversion to text is too slow, check how long it takes for the button to appear in the evidence details page.

Uninstall

The OCR module can be uninstalled from the Windows Control Panel.

NOTE: uninstalling an OCR module does not compromise converted and tagged text.

Files installed at the end of installation

Various folders appear at the end of installation, organized according to the type of architecture and installed optional components:

<table>
<thead>
<tr>
<th>Folder</th>
<th>Included files</th>
</tr>
</thead>
<tbody>
<tr>
<td>backup</td>
<td>The folder contains files with data saved in the databases. See &quot;Backup management&quot; on page 91</td>
</tr>
<tr>
<td>bin</td>
<td>The folder contains the utilities (i.e.: rcs-db-config) used to set RCS utilities. See &quot;Setup utilities&quot; on page 65</td>
</tr>
</tbody>
</table>

Path:
- C:\RCS\DB\backup
- C:\RCS\Collector\bin
### Folder Included files

| certs          | The folder contains the certificates used by the various services to access Master Node. They are updated when RCS settings are edited.  
|                | See "Editing Master Node settings" on page 66  
| Path:          | \RCS\DB\config\certs  
| config         | The folder contains:  
|                | - decoy.htm page to redirect or customize undesired remote login landing on the server. It can be customized. See "Routine maintenance procedures" on page 60  
|                | - License file copied from the USB key.  
|                | - Export.zip: file containing the style sheets to be customized for evidence export.  
| Path:          | C:\RCS\DB\config  
|                | C:\RCS\Collector\config  
| log            | RCS component log file.

Optional and additional component installation

Presentation

Introduction

RCS installation may include the installation of other optional and additional components:

- Network Injector
- Anonymizer
- Shard database
- Collector

Content

This section includes the following topics:

Anonymizer installation and settings ................................................................. 38
What you should know about Network Injector Appliance ................................. 40
Network Injector Appliance installation ............................................................ 42
What you should know about Tactical Network Injector ...................................... 45
Tactical Control Center installation .................................................................... 47
Network Injector settings .................................................................................... 50
Additional component installation in distributed architecture ............................. 52
Anonymizer installation and settings

Introduction
Installing Anonymizers in a chain is optional and is used to redirect data from a group of agents. The Anonymizer is installed on a server connected to Internet which cannot be reconnected to the rest of the infrastructure like, for example, a VPS (Virtual Private Server), rented for this purpose. Once installed and set up, the Anonymizer communicates its status to the Network Controller every 30 seconds.

Installation requirement
A VPS must be rented with the minimum system requirements defined in the contract phase to install anonymizers.
See "Minimum system requirements" on page 14

Installation

CAUTION: use SSH protocol for all installation, setup and data exchange operations to the remote unit.

To install the Anonymizer on a private server:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>From RCS Console, in the System section, click Frontend, New Anonymizer.</td>
</tr>
</tbody>
</table>
| 2    | Enter the required data and click Save.  
Result: the Anonymizer appears in the Anonymizer list with icon 🦇. In the Monitor section, a monitoring object appears for the added Anonymizer. |
| 3    | Select the Anonymizer and drag it to the Collector or another Anonymizer to create a chain.  
Result: the Anonymizer appears in the Anonymizer list with icon 🦇. |
| 4    | Click Download installer.  
Result: the rcsanon_install.zip installer file is generated and saved on the console desktop. |
| 5    | Connect to the server and copy file rcsanon_install.zip to a folder on the server. |
Step  Action

6  Connect to the server, unzip the file and launch the installer by entering:
   # sh rcsanon-install.sh

   Result: the Anonymizer is installed in server folder /opt/rcsanon and listens on port 443.

7  From RCS Console, in the System section, Frontend, select the Anonymizer and click Apply configuration.

Anonymizer data
Selected Anonymizer data is described below:

<table>
<thead>
<tr>
<th>Data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>User’s description</td>
</tr>
<tr>
<td>Description</td>
<td>Software version. To view software versions for all components see the Monitor section.</td>
</tr>
<tr>
<td>Version</td>
<td>IP address of the VPS where the Anonymizer was installed.</td>
</tr>
<tr>
<td>Address</td>
<td>443. To view the ports to be opened for firewall see &quot;Ports to be opened on the firewall&quot; on page 14.</td>
</tr>
<tr>
<td>Port</td>
<td>If enabled, Network Controller acquires Anonymizer status every 30 seconds. If not enabled, the Anonymizer runs normally but Network Controller does not check status. To be used to avoid connections with Anonymizers in untrusted environments.</td>
</tr>
<tr>
<td>Monitor via NC</td>
<td>Last messages logged. To view log file content see &quot;System logs&quot; on page 71</td>
</tr>
</tbody>
</table>

Boot check
The Anonymizer sends its logs to syslog that manages and saves them in a file. Files are normally saved in the following files (based on the operating system version and syslog service settings):
   /var/log/messages
   /var/log/syslog

IP address check
To check all Anonymizer addresses, start the RCS Console, System section, Frontend: the addresses appear on the screen. See "Anonymizer update" on page 61
Editing settings
To edit Anonymizer settings:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In the <strong>System</strong> section, <strong>Frontend</strong>, click on the Anonymizer icon.</td>
</tr>
<tr>
<td>2</td>
<td>Edit the required data and click <strong>Save</strong>. <strong>Result:</strong> the screen is updated.</td>
</tr>
<tr>
<td>3</td>
<td>Check Anonymizer status in the <strong>Monitor</strong> section.</td>
</tr>
<tr>
<td>4</td>
<td>Click <strong>Apply settings</strong>. <strong>Result:</strong> RCS connects to the Anonymizer and copies the new settings.</td>
</tr>
</tbody>
</table>

Uninstall
To uninstall the Anonymizer delete the private server folder `/opt/rcsanon` and delete the Anonymizer from the RCS Console. See "Anonymizer update".

What you should know about Network Injector Appliance

Introduction
Network Injector Appliance is a network server for installation in an intra-switch segment at an Internet service provider.
An RCS agent can be injected in visited web pages or downloaded files by monitoring target connections.

**NOTE:** Network Injector Appliance is supplied installed and ready for use, complete with disk encryption and all the foreseen applications.

Operations
Network Injector Appliance analyzes the target's traffic and, in the event set rules match, injects agents.
Network Controller queries Network Injector Appliance every 30 seconds to receive status and logs and send injection rules.

Network connections
Network Injector Appliance requires two network connections: one to tap the target's traffic and the other to inject agents and communicate with the RCS server.
Tip: after setup, Network Injector Appliance is independent. It can be left to run without further communication with the RCS server.

Service call: given special Network Injector Appliance features, this manual only provides essential connection indications, letting support service provide all those strategic aspects that are defined in the start-up and delivery phase.

Connection layout in LAN (WiFi and non)
Typical layout for an Access Switch that routes data to Network Injector Appliance:

![Diagram showing network layout](image)

*Figura 1: Network Injector Appliance in LAN: physical layout*

Connection layout as an intra-switch segment
Typical layout with TAP device to boost Access Switch data routing:
**Data sniffing via TAP, SPAN port**

A TAP device is often installed at the Internet service provider and is the most appropriate solution for traffic monitoring. Using a SPAN port has the following drawbacks:

- switch CPU use may significantly increase due to port use
- the SPAN port on the switch may already be in use.

**Network Injector Appliance installation**

**Introduction**

Network Injector Appliance is supplied already installed and set up. Its hardware must be installed at the Internet service provider.

**Package content**

The package includes a series of GBIC connectors to monitor optic fiber and RJ45 connections.

**Installation sequence**

> Tip: prepare Network Injector Appliance at your offices before installing it at the Internet provider.

The full installation sequence is provided below:
Rear panel description

The rear panel is described below:

A list of visible components is provided below:

<table>
<thead>
<tr>
<th>Area</th>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Sniffing ports</td>
<td>Up to four connections to the traffic switches on the targets to be monitored or up to two for redundant devices.</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>NOTE:</strong> optic fiber or copper connections are admitted.</td>
</tr>
<tr>
<td>2</td>
<td>Mother board</td>
<td>Standard PC outputs for monitor and keyboard connections to launch <code>sysconf</code> utilities or complete updates from the installation CD.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>See &quot;Routine maintenance procedures&quot; on page 60</td>
</tr>
<tr>
<td>3</td>
<td>Management and injection ports</td>
<td><strong>Port 1:</strong> network connection with Network Controller to receive settings and send status. The address must be set with the <code>sysconf</code> utility.</td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Port 2:</strong> network connection for traffic injection.</td>
</tr>
</tbody>
</table>

Network connections

Tip: prepare Network Injector Appliance first connecting it to its network and setting parameters to then be transferred to the Internet provider.

The network connection procedure is described below:
Steps  Layout

1. Connect the target’s traffic switch to the sniffing ports[1].

   IMPORTANT: for redundant devices, connect both devices.

2. Connect management (port 1) and injection (port 2) ports [3] to the Internet.
3. Connect the monitor and keyboard [2].

Network Injector Appliance settings

Tip: prepare Network Injector Appliance first connecting it to its network and setting parameters to then be transferred to the Internet provider.

The settings procedure if provided below:

**Step**  **Action**

1  Turn on the device and login with your credentials:
   - Username: root
   - Password: rcnsia

   **CAUTION: immediately change the password**

2  From the command prompt, run sysconf and use the Arrow and TAB keys to move between and open menus.
   Select the Network menu and its sub-menus to enter all the data required for Network Controller connections:
   - host name,
   - IP address,
   - Netmask,
   - Gateway

   **CAUTION: leave DNS automatically read**

   Select File menu, Save configuration: the configuration is saved.

4  In Master Node, from folder \RCS\DB\config\certs copy the Network Injector rcs.pem and rcs-network.sig authentication files to Network Injector folder rcsipa/etc.
Step  Action

5  From the remote terminal, in Network Injector Appliance open file /rcsip/a/etc/rcsredirect.conf and set management port 1 in variable response_iface and injection port 2 in variable sniffing_iface.
   * response_iface="eth0"
   * sniffing_iface="eth1"

   or, if network accelerator cards are used:
   * response_iface="eth0"
   * sniffing_iface="dag0"

6  From the remote terminal, connect to Network Injector Appliance and start the service by entering command:
   # /etc/init.d/rcsip/a start

7  From RCS Console create a Network Injector and send the configuration.
   See "Managing the Network Injector" on page 95

Network Injector Appliance start check
Check the log file in folder /rcsnia/log.
See "System logs" on page 71

IP address check
To check all addresses, open RCS Console, System section, Network Injector and view data for each Network Injector. See "Managing the Network Injector" on page 95

Uninstall
To uninstall a Network Injector Appliance, simply delete the object in RCS Console and turn off the device.
See "Managing the Network Injector" on page 95

What you should know about Tactical Network Injector

Introduction
Tactical Network Injector is a notebook for tactical installation on LAN or WiFi networks. Tactical Control Center, installed on it, can be used to open protected WiFi networks or wired networks or emulate an Access Point already known to the target device.
NOTE: Tactical Network Injector is supplied installed and ready for use, complete with disk encryption and all the foreseen applications.

Network connections
Tactical Network Injector requires two network connections: one to tap the target's traffic and the other to inject agents and communicate with the RCS server.

Tip: after setup, Tactical Network Injector is independent. Internet connection is required to obtain updated rules from RCS and send logs (synchronization).

Access point emulation connection diagram
Typical layout in WiFi where Tactical Network Injector emulates the open WiFi network access point to attract target devices.

![Access Point Emulation Diagram](image_url)

*Figure 1: Tactical Network Injector: access point emulation diagram*
Tactical Control Center installation

Introduction
Tactical Control Center is normally already installed and set on the Tactical Network Injector notebook.
It can be re-installed on a notebook using a restore disk.

IMPORTANT: installation and settings require the Master Node authentication files and the creation of a Network Injector on RCS Console. Be well prepared for installations far from the operating center.

Tactical Control Center features
Tactical Control Center lets you:
- crack protected WiFi network passwords
- simulate a WiFi network to attract target devices
- automatically identify connected devices using the rules and inject them
- manually identify connected devices using the rules and inject them

Package content
The package includes a notebook and installation CD.

The full installation sequence is provided below:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Install and set up the operating system and create the Tactical Control Center object from the RCS Console.</td>
</tr>
<tr>
<td>2</td>
<td>Set Network Injector.</td>
</tr>
</tbody>
</table>

Paragraph
"Operating system installation and settings" below
"Network Injector settings" on page 50

Requirements
In Master Node, copy the rcs.pem and rcs-network.sig authentication files from folder \RCS\DB\config\certs: they will be copied to Tactical Network Injector.

Operating system installation and settings
The procedure is described below:
<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Connect the notebook to the network via Ethernet cable and insert the installation CD: the operating system is installed and the notebook turns off when completed. <strong>IMPORTANT:</strong> the computer must remain connected to the internet during the entire installation process.</td>
<td>-</td>
</tr>
<tr>
<td>2. Reboot the notebook; enter the <em>passphrase</em> to unlock the encrypted disk. The passphrase for first boot is &quot;firstboot&quot;.</td>
<td>-</td>
</tr>
<tr>
<td>3. The first setup window appears.</td>
<td></td>
</tr>
</tbody>
</table>
| 4. Select the language. | ![System Configuration Welcome](image)
<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>5. Select the correct time zone.</td>
<td>![Screen showing a world map with Rome selected]</td>
</tr>
<tr>
<td>6. The keyboard layout is read. Only change it if necessary.</td>
<td>![Screen showing a keyboard layout selection]</td>
</tr>
</tbody>
</table>
Steps | Result
---|---
7. Enter user data: operating system setup starts. 

**WARNING:** if you lose your password you must re-install Tactical Control Center.

**IMPORTANT:** the entered password becomes the disk encryption passphrase requested each time the notebook is turned on. The password is also requested at user login.

8. The standard login page appears at the end of operating system installation.

### IP address check

To check all addresses, open RCS Console, **System** section, **Network Injector** and view data for each Network Injector. See "Managing the Network Injector" on page 95.

### Uninstall

To uninstall Tactical Control Center, simply remove it from the computer. To uninstall a Tactical Network Injector, simply delete the object in RCS Console and turn off the device.

See "Managing the Network Injector" on page 95.

### Network Injector settings

**Introduction**

Network Injector must be set up to allow the technician to create sniffing and injection rules and to include the device in Network Controller polling. Once installed and set up, the Network Controller polls the Network Injector status every 30 seconds.
Adding a Network Injector

To complete Network Injector installation:

**Step**  **Action**

1. From **RCS Console**, in the **System** section, click **Frontend, New Injector**.

2. Enter the required data and click **Save**.
   
   **Result**: Network Injector appears in the list. RCS connects to Network Injector and checks operations. A monitoring object appears in the **Monitor** section for the added Network Injector.

3. Check Network Injector status in the **Monitor** section.

Network Injector data

Selected Network Injector data is described below:

<table>
<thead>
<tr>
<th><strong>Data</strong></th>
<th><strong>Description</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Name Description</td>
<td>User's descriptions.</td>
</tr>
<tr>
<td>Version</td>
<td>Software version. To view the software versions of all the components see &quot;System monitoring (Monitor)&quot; on page 98.</td>
</tr>
<tr>
<td>Address</td>
<td>Device IP address.</td>
</tr>
<tr>
<td>Port</td>
<td>4444. To view all ports to be opened on the firewall see &quot;Ports to be opened on the firewall&quot; on page 14.</td>
</tr>
<tr>
<td>Monitor via NC</td>
<td>If enabled, Network Controller acquires the Network Injector status every 30 seconds. If not enabled, Network Injector continues sniffing and injection operations, but the Network Controller does not check its status. Used when connections to Network Injector are down for any reason once installed at ISP, or for tactical use.</td>
</tr>
<tr>
<td>Log</td>
<td>Last messages logged. <strong>NOTE:</strong> Tactical Network Injector log updates depend on the frequency with which the operator enables synchronization.</td>
</tr>
</tbody>
</table>

To view log file content see "System logs" on page 71.

- : update the list.
- x: delete viewed logs.
Editing settings
The IP address already set on the device is simply indicated in RCS Console. If changed, Network Injector must be re-installed see "Network Injector Appliance installation" on page 42, and IP address changed in RCS Console.

Additional component installation in distributed architecture

Introduction
Installation in distributed architecture lets you add Shard databases (larger data volumes) and Collectors (one for each Anonymizer chain).

Service call: distributed architecture design must be checked with HackingTeam support service.

Additional component installation requirements
Before installing additional components, complete Master Node and Collector installation. See "RCS server installation in distributed architecture" on page 22.

Installation sequence
The complete additional component installation sequence is described below:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
<th>Machine</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Prepare that indicated in installation requirements.</td>
<td>-</td>
</tr>
<tr>
<td>2</td>
<td>Install additional Shard databases.</td>
<td>server in back end environment</td>
</tr>
<tr>
<td>3</td>
<td>Check installation logs.</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Install additional Collectors.</td>
<td>server in front end environment</td>
</tr>
<tr>
<td>5</td>
<td>Check installation logs.</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td>Check redirecting on each Collector.</td>
<td>same server or other computer</td>
</tr>
<tr>
<td>7</td>
<td>Check for the installed objects in the System, Backend and Frontend sections.</td>
<td>RCS Console</td>
</tr>
</tbody>
</table>

Additional Shard database installation
To install an additional Shard database in back end environment:
### Steps

| 1. Insert the CD with the installation package. Run file RCS-<version>.exe in folder x:\setup: the first wizard window appears. |
| 2. Click **Next**. |
| 3. Select **Distributed**. |
| 4. Click **Next**. |

### Result

![Welcome to the RCS Setup Wizard](image)

- **All-in-one**
  - All the components will be installed on a single machine. Easy setup for small deployments.
- **Distributed**
  - The installation is fully customizable. Each component can be installed on different machines to achieve maximum scalability. Suggested for big deployments.
<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>5. Select <strong>Shard</strong>.</td>
<td><img src="image1.png" alt="Shard selection" /></td>
</tr>
<tr>
<td>6. Click <strong>Next</strong>.</td>
<td><img src="image2.png" alt="Next button" /></td>
</tr>
<tr>
<td>7. Enter the system administrator’s password.</td>
<td><img src="image3.png" alt="Password entry" /></td>
</tr>
<tr>
<td>8. Click <strong>Next</strong>: when installation has completed, services are started and are ready to receive data and communicate with the RCS Console.</td>
<td><img src="image4.png" alt="Configuration settings" /></td>
</tr>
</tbody>
</table>
### Steps

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>9. Enter the Master Node server name or IP address (i.e.: RCSMasterNode).</td>
<td><img src="image1.png" alt="Image of RCS Setup Configuration" /></td>
</tr>
<tr>
<td>10. Click <strong>Install</strong>: when installation has completed, services start and attempt to communicate with Master Node. The server in back end environment is protected and any remote login is redirected.</td>
<td><img src="image2.png" alt="Image of Warning Symbol" /> NOTE: if the server name or IP address needs to be changed after installation due to faults see &quot;Editing Master Node settings&quot; on page 66.</td>
</tr>
</tbody>
</table>

### Additional Collector installation

To install several Collectors in front end environment:

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Insert the CD with the installation package. Run file RCS-{version}.exe in folder x:\setup: the first wizard window appears.</td>
<td><img src="image3.png" alt="Image of Welcome to the RCS Setup Wizard" /></td>
</tr>
<tr>
<td>2. Click <strong>Next</strong>.</td>
<td></td>
</tr>
<tr>
<td><strong>Steps</strong></td>
<td><strong>Result</strong></td>
</tr>
<tr>
<td>-----------</td>
<td>------------</td>
</tr>
<tr>
<td>3. Select <strong>Distributed</strong>.</td>
<td>![Image of Distributed option selected in RCS Setup screen]</td>
</tr>
<tr>
<td>4. Click <strong>Next</strong>.</td>
<td></td>
</tr>
<tr>
<td>5. Select <strong>Collector</strong>.</td>
<td>![Image of Collector option selected in RCS Setup screen]</td>
</tr>
<tr>
<td>6. Click <strong>Next</strong>.</td>
<td></td>
</tr>
</tbody>
</table>
## Steps

<table>
<thead>
<tr>
<th>Steps</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>7. Enter the system administrator password indicated in Master Node installation.</td>
<td><img src="image1" alt="Screenshot of entering system administrator password" /></td>
</tr>
<tr>
<td>8. Click <strong>Next</strong>: installation is launched.</td>
<td><img src="image2" alt="Screenshot of clicking Next" /></td>
</tr>
<tr>
<td>9. Enter the Master Node server name or IP address (i.e.: <strong>RCSMasterNode</strong>).</td>
<td><img src="image3" alt="Screenshot of entering server name" /></td>
</tr>
<tr>
<td>10. Click <strong>Install</strong>: when installation has completed, services start and attempt to communicate with Master Node. The server in back end environment is protected and any remote login is redirected.</td>
<td><img src="image4" alt="Screenshot of clicking Install" /></td>
</tr>
</tbody>
</table>

### Checking service start

Make sure all RCS services are up and running. If services are not running, manually start them. See "**List of started RCS services**" on page 29

### Checking Collector redirecting

To check whether Collector installation was successfully completed:
If on the server

Then

- open a browser
- enter localhost
- Result: the browser must be redirected to Google.

If on another computer

Then

- open a browser
- enter http://<front end server name or IP address>.
- Result: the browser must be redirected to Google.

Tip: you can edit redirecting or create a custom page. To do this, edit page decoy.html.

See "Files installed at the end of installation" on page 35

Checking installation logs
If errors occur during installation, check logs and send them to support service if necessary.
See "System logs" on page 71

Check IP addresses
To check all addresses, start the RCS Console, System section, Frontend: Collector addresses appear on the screen. See "Anonymizer installation and settings" on page 38

Uninstall
RCS can be uninstalled from the Windows Control Panel.

CAUTION: data is lost when a Shard database is uninstalled. For correct operations, backup data. See "Backup management" on page 91.

NOTE: data will not be lost when a Collector is uninstalled.
Routine maintenance and software updates

Presentation

Introduction

Routine maintenance includes RCS updates and operations scheduled or indicated by support service for system performance upkeep.

WARNING: lack of maintenance may cause unforeseeable system behavior.

Content

This section includes the following topics:

- What you should know about RCS maintenance ........................................... 60
- Routine maintenance procedures ................................................................. 60
- RCS server update .................................................................................... 61
- RCS Console update .................................................................................. 61
- Anonymizer update .................................................................................. 61
- Network Injector Appliance update ........................................................... 62
- Tactical Network Injector update ................................................................. 62
What you should know about RCS maintenance

Receiving updates
Support service publishes the update package on the support portal for every RCS software release. The package can be linked to a new license file that may be required during the update procedure.
Download the package and complete the update procedures.

Updating machine behavior
During updates, normal system service may not be guaranteed.
All data normally received and managed by the updating machine are kept for the required period of time and automatically retrieved as soon as the system resumes normal operations.

Routine maintenance procedures

Introduction
Procedure recommended to keep system performance high are provided below.

WARNING: lack of maintenance may cause unforeseeable system behavior.

Check and delete log files
Purpose: check the amount of log files and delete the older ones to avoid occupying excessive disk space.
Suggested frequency: depends on the amount of agents being monitored. Checking disk space once a month may be sufficient.

Checking available backup disk space
Purpose: routinely check the backup disk based on the quantity and frequency of backups set in the RCS Console System section.
Recommended frequency: depends on backup frequency and size.

Linux operating system updates
Purpose: keep Linux operating systems installed on the VPS that host Anonymizers and Network Injectors constantly updated.
RCS server update

Update requirements

CAUTION: fully backup before proceeding with an update. See "Backup management" on page 91

Update methods
Once the installer is launched, it identifies machine components and suggests automatic update. The procedure is thus identical in both All-in-One and distributed architecture.

RCS server(s) update

IMPORTANT: the hardware key must always be inserted in the server.

To update RCS, repeat the following steps for each server:

Step  Action
1  Run the rcs-<version>.exe installation file: the list of installed components that will be automatically updated appears. Click Next.
2  Select the new license file from the installation package. Click Next.

RCS Console update

Update requirements
No data is saved in RCS Console. The software can thus be updated without any special precaution.

RCS Console update

The console is automatically updated by the server, if necessary, after each login.
As an alternative, repeat the installation procedure using the files in the new installation package. See "RCS Console installation" on page 30

Anonymizer update

Update requirements
No data is saved in Anonymizers. The software can thus be updated without any special precaution.
Anonymizer update
Repeat the installation procedure using the files in the new installation package.

**IMPORTANT: keep the Linux operating system updated**

See "Anonymizer installation and settings" on page 38

Network Injector Appliance update

Introduction
Network Injector Appliance can be fully re-installed, including the operating system.

Network Injector Appliance update

**CAUTION: updating deletes all data on the machine.**

To fully re-install Network Injector Appliance:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Insert the installation CD and boot from CD: disk content will be deleted and both the operating system and Network Injector files will be re-installed. This procedures takes about 20 minutes.</td>
</tr>
<tr>
<td>2</td>
<td>Reboot the server: the procedure must be confirmed.</td>
</tr>
<tr>
<td></td>
<td><strong>CAUTION: the entire hard disk will be deleted.</strong></td>
</tr>
<tr>
<td></td>
<td><strong>Result:</strong> Network Injector Appliance is installed.</td>
</tr>
<tr>
<td>4</td>
<td>From RCS Console, System section, Network Injector send rules to the updated Network Injector.</td>
</tr>
<tr>
<td></td>
<td>See &quot;Managing the Network Injector&quot; on page 95</td>
</tr>
<tr>
<td>5</td>
<td>From RCS Console, Monitor section, check Network Injector status.</td>
</tr>
</tbody>
</table>

Tactical Network Injector update

Introduction
Tactical Network Injector can be fully installed, operating system included, or partially updated, excluding operating system re-installation.
Full Tactical Network Injector update

CAUTION: updating deletes all data on the machine.

Tactical Network Injector is updated from a CD or installation file distributed by HackingTeam support service.

Partial Tactical Network Injector update

Tactical Network Injector is updated from an installation file distributed by HackingTeam support service.

Copy the installation file on the device and run it to complete updating without losing data.
Editing Master Node and Collector settings

Presentation

Introduction

Component settings can be edited after installation if needed.

Content

This section includes the following topics:

- What you should know about settings .......................................................... 65
- Setup utilities ........................................................................................................ 65
- Editing Master Node settings ............................................................................ 66
- Modifica alla configurazione di Collector ......................................................... 67
- Settings check ..................................................................................................... 68
What you should know about settings

What you can edit
The following Master Node Collector installation data can be edited:
- the Master Node name/IP address
- System administrator’s password
- backup folder
- The outgoing mail server to send alert e-mails

When to edit settings
The name/IP address or password may need to be changed when servers are replaced or simply due to incorrect data entry during installation.

IMPORTANT: specifying a different backup folder, for example on a remote device, is highly recommended to protect backup data.

Order used to edit settings
Since the server where Master Node is installed is the system "master", the following order must be followed to change the installation:

1. Change the Master Node name/IP address or password
2. Inform the Collector of the new Master Node name/IP address or password

Mail server settings
The RCS system can be set to send e-mail when the first pieces of evidence is received from a target. E-mail addressees must have Analyst privileges and belong to the alerting group set for that operation.

To do this, set the sender settings of the outgoing mail server and, especially, the required authentication level.

See "Setup utilities" below

Setup utilities

RCS utilities
Setup is run through some utilities in the Windows command prompt in folder C:\RCS\DB\bin or C:\RCS\Collector\bin (based on the type of installation).
Component setup utilities include:
• for Master Node: **rcs-db-config**
• for Collector: **rcs-collector-config**

**NOTE:** The RCS settings procedure in All-in-One architecture is identical to the RCS one in distributed architecture.

**Utility command syntax**
Utility command syntax is the following:

```bash
> rcs-db-config -x AAA
> rcs-collector-config -x AAA
```

Where:

- `-x`: selected option
- `AAA`: entered value

**Other options**
For prompt diagnostics, support service can request additional commands be launched. For the correct syntax, enter:

```bash
> rcs-db-config --help
> rcs-collector-config --help
```

🛠️ **Service call:** only use the other options if indicated by support service.

⚠️ **Tip:** syntax "-x" is the short version of syntax "--xxxxx": "rcs-db-config -n" is the same as "rcs-db-config --CN"

**Editing Master Node settings**
From folder **C:\RCS\DB\bin** or **C:\RCS\Collector\bin** (based on the type of installation) enter the following commands:

<table>
<thead>
<tr>
<th>To edit...</th>
<th>Enter...</th>
</tr>
</thead>
</table>
| the Master Node name/IP address | > rcs-db-config -n <name> -g  
| | or  
| | > rcs-db-config -n <IPaddress> -g |

**Result:** certificates are updated and appear in folder **\RCS\DB\config\certs**. Collector settings must also be edited. See “Modifica alla configurazione di Collector” on next page.
To edit... Enter...

the System administrator’s password (admin) > rcs-db-config -R <password>

Result: certificates are updated and appear in folder \RCS\DB\config\certs. Collector settings must also be edited. See "Modifica alla configurazione di Collector" below

backup folder > rcs-db-config -B <folder>

NOTE: "<folder>" can be a path for the RCS\db folder or absolute path.

IMPORTANT: any backup files in the previously set folder will be copied to the new one.

Result: all subsequent backup files are saved in the new folder.

Tip: a remote device can be installed in an NTFS folder using Windows Disk Manager: this way, a remote disk can be used for backup.

outgoing mail server settings for alert e-mails > rcs-db-config -M -server <hostName>:<portNumber> to set the outgoing main server name and port to be used.
> rcs-db-config -from <senderEmail> to set the alert e-mail sender's e-mail (i.e.: "alert@myplace.com").
> rcs-db-config -user <userName> To set the e-mail sender's user name.
> rcs-db-config -pass <password> To set his password.
> rcs-db-config -auth <authenticationType> To set the type of authentication to be used ("plain", "login" or "cram_md5").

Modifica alla configurazione di Collector

From folder C:\RCS\DB\bin or C:\RCS\Collector\bin (based on the type of installation) enter the following commands:
### Settings check

Previous and current settings can be checked using RCS utilities. To check previous and current settings, launch the relevant utilities without any option:

- `> rcs-db-config`
- `> rcs-collector-config`

#### Example of settings check output

An example of a check is given below:

```plaintext
Current configuration:
{"CA_PEM":"rcs.pem",
"DB_CERT":"rcs-db.crt",
"DB_KEY":"rcs-db.key",
"LISTENING_PORT":443,
"HB_INTERVAL":30,
"WORKER_PORT":5150,
"CN":"172.20.20.157",
"BACKUP_DIR":"backup",
"PERF":true,
"SMTP":"mail.abc.com:25",
"SMTP_FROM":"alert@abc.com",
"SHARD":"shard0000"}
```
Troubleshooting

Presentation

Introduction

RCS is a system where the greatest focus must be on collected data transmission, decoding and saving. RCS design focuses on preventing any data loss and quickly managing potential errors that may occur.

Content

This section includes the following topics:

<table>
<thead>
<tr>
<th>Topic</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Potential faults</td>
<td>70</td>
</tr>
<tr>
<td>System logs</td>
<td>71</td>
</tr>
<tr>
<td>Component status check procedure</td>
<td>73</td>
</tr>
<tr>
<td>Service restart procedures</td>
<td>74</td>
</tr>
<tr>
<td>Hardware component service procedures</td>
<td>77</td>
</tr>
</tbody>
</table>
Potential faults

Potential installation faults
Following is a list of potential faults that may occur during installation and references to recommended actions:

<table>
<thead>
<tr>
<th>If...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>installation does not progress</td>
<td>make sure the hardware key is correctly inserted.</td>
</tr>
<tr>
<td>RCS console cannot connect to the server</td>
<td>• Make sure you logged in with the System administrator's name, password and name of the server where Master Node was installed.</td>
</tr>
<tr>
<td>or</td>
<td>• connect from the browser with &quot;https://&lt;serverName&gt;&quot; or &quot;https://&lt;backendServerName&gt;&quot;</td>
</tr>
<tr>
<td>or</td>
<td>• The browser inspects the HTTPS certificate and returns some addresses to find out what went wrong.</td>
</tr>
</tbody>
</table>

Possible server problems
Following is a list of potential faults that may occur during product use and references to recommended actions:

<table>
<thead>
<tr>
<th>If...</th>
<th>And...</th>
<th>Then...</th>
</tr>
</thead>
<tbody>
<tr>
<td>cannot connect to Master Node</td>
<td>the hardware key is correctly inserted but Master Node service does not start</td>
<td>• check Master Node service status</td>
</tr>
<tr>
<td>data no longer arrives from agents</td>
<td>from RCS Console the Collector is running and correctly communicates</td>
<td>• request hardware key replacement.</td>
</tr>
<tr>
<td>The Master Node is not available</td>
<td>The Collector is running</td>
<td>check Collector status.</td>
</tr>
<tr>
<td>images are not converted into text</td>
<td>the OCR module is installed</td>
<td>• check whether an update is in progress</td>
</tr>
<tr>
<td>The Collector is not available</td>
<td>-</td>
<td>• check the Collector log file</td>
</tr>
<tr>
<td></td>
<td></td>
<td>check how slow in the module log and install another OCR module (if in distributed architecture).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>restart RCScollector service.</td>
</tr>
</tbody>
</table>
If data is queued in the Master Node
And the most recent data does not appear on RCS
Then check Worker service status for Master Node and for the other Shards.

Network Controller indicates an error
Then Connect to the machine where Network Injector or Anonymizer is installed and check the log file.

Potential backup problems
Following is a list of potential faults that may occur during backup and references to recommended actions:

| If backup status is error | Then check available disk space and manually restart backup. |

To learn more
To check component status see "Component status check procedure" on page 73
To restart services See "Service restart procedures" on page 74

System logs

Introduction
Each RCS component generates daily logs that help to analyze possible fault or error causes. Analyzing file content lets you review RCS operations step by step and understand any error cause (i.e.: service starts but immediately stops, service started but with incorrect deploy.htm page redirect).

Log analysis utility
The reasons that can lead to log analysis are provided below:

<table>
<thead>
<tr>
<th>Component</th>
<th>Analysis reason</th>
</tr>
</thead>
<tbody>
<tr>
<td>Master Node</td>
<td>Check problems with RCS Console.</td>
</tr>
<tr>
<td>Collector</td>
<td>Check data reception from agents.</td>
</tr>
<tr>
<td>OCR module</td>
<td>Check for any slow image conversions into text.</td>
</tr>
<tr>
<td>Network Controller</td>
<td>In the event of doubts on Network Injector or Anonymizer status.</td>
</tr>
<tr>
<td>Network Injector</td>
<td>Check completed operations.</td>
</tr>
<tr>
<td>Anonymizer</td>
<td>Check incoming data flow from agents.</td>
</tr>
</tbody>
</table>
Log file example

The log file name has the following syntax: <component> yyyy-mm-dd.log (i.e.: rcs-dbdb 2012-02-04.log)

RCS log files

Log files generate by components in full installation are provided below:

<table>
<thead>
<tr>
<th>Component</th>
<th>Folder</th>
</tr>
</thead>
<tbody>
<tr>
<td>Master Node</td>
<td>C:\RCS\DB\log</td>
</tr>
<tr>
<td>Collector</td>
<td>C:\RCS\Collector\log</td>
</tr>
<tr>
<td>OCR module</td>
<td>C:\RCS\DB\log</td>
</tr>
<tr>
<td>Network Controller</td>
<td>C:\RCS\Collector\log</td>
</tr>
<tr>
<td>Network Injector</td>
<td>/rcsnia/log</td>
</tr>
<tr>
<td>Anonymizer</td>
<td>/var/log</td>
</tr>
</tbody>
</table>

⚠️ WARNING: the lack of log files indicates incomplete installation.

Quick log display

BareTail, an application that lets you immediately view the content of several log files, is included in the RCS installation.

To run BareTail, enter:
> rcs-db-log

Log file content

Each record is identified by one of the following levels of severity:

<table>
<thead>
<tr>
<th>Severity level</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fatal</td>
<td>RCS is not running and requires service (i.e.: no settings, no certificates).</td>
</tr>
<tr>
<td>Error</td>
<td>There is a component error but RCS can guarantee main service coverage (i.e.: Master Node not running).</td>
</tr>
<tr>
<td>Debug</td>
<td>(only appears if enabled upon support service indication, increases and provides more details on log records to resolve problems).</td>
</tr>
<tr>
<td>Info</td>
<td>information note.</td>
</tr>
</tbody>
</table>
Component status check procedure

Introduction
Typical procedures on how to check hardware and software status are provided below.

Installed license check
Check all licenses installed in RCS, including updates.

Command
In folder C:\RCS\DB\bin enter rcs-db-license

Master Node status check
Make sure Master Node is routinely communicating data to databases via Worker services.

Command
In folder C:\RCS\DB\bin enter rcs-db-evidence-queue.
Result: an example is provided below.

<table>
<thead>
<tr>
<th>instance</th>
<th>subtype</th>
<th>last sync time</th>
<th>logs</th>
<th>size</th>
</tr>
</thead>
<tbody>
<tr>
<td>RCS_2000000001_47170c3e84f76d910677ec2e85f268db2f06c638</td>
<td>windows</td>
<td>2012-02-06 08:18:38 UTC</td>
<td>10</td>
<td>114.85 KB</td>
</tr>
</tbody>
</table>

What to check
If the logs and size values begin to significantly increase, this may be due to Worker service that is not running. Check status on each Worker service.

Checking Worker service status
Make sure that Worker service is correctly running to decode and save data in databases.

What to check
In folder C:\RCS\DB\log check log rcs-worker*.log logs

Check agent status via Collector
Make sure agents are routinely communicating their status to RCS via Network Controller and that they are sending their data to Collector. Agent data may be lost in the event of a persistent Collector fault.
Command

In folder C:\RCS\Collector\bin enter rcs-collector-status

Result: the Collector status report appears

<table>
<thead>
<tr>
<th>Instance</th>
<th>subtype</th>
<th>last sync time</th>
<th>status</th>
<th>logs</th>
<th>size</th>
</tr>
</thead>
<tbody>
<tr>
<td>RCS_0000000001</td>
<td>WINDOWS</td>
<td>2012-02-03 15:44:54 UTC</td>
<td>IDLE</td>
<td>0</td>
<td>0 0</td>
</tr>
<tr>
<td>RCS_0000000007</td>
<td>WINDOWS</td>
<td>2012-02-01 19:26:35 UTC</td>
<td>IDLE</td>
<td>0</td>
<td>0 0</td>
</tr>
</tbody>
</table>

What to check

The Last sync time must be as recent as possible, compatible with the set synchronization methods for each agent: a recent Last sync time indicates that agents correctly communicate with Collector. If Last sync time is not recent, wait for any other synchronizations to check whether it is updated. Alternatively, check Collector logs to see whether there are synchronization attempts: in this case inform support service.

The logs value must be minimum since it is the data saved by the Collector awaiting to be sent to Master Node. If the value is high, this means that Master Node is not running or is not connected. Check Master Node service status.

The number of logs will decrease as soon as the connection is resumed.

Network Injector start check

Network Injector logs are normally saved in folder /rcsnia/log.

To learn more

To view logs see "System logs" on page 71

Service restart procedures

Introduction

Typical procedures on how to restart services are provided below.

Restarting RCSDB service

Purpose

In the event of faults, RCSDB service can be restarted using this utility instead of using the Windows Service Management function.
Command

The commands to start, stop and restart the service are given below in order:
- > rcs-db-service start
- > rcs-db-service stop
- > rcs-db-service restart

Restarting MongoDB service

Purpose

In the event of faults, MongoDB service can be restarted using this utility instead of using the Windows Service Management function.

Command

The commands to start, stop and restart the service are given below in order:
- > rcs-mongo-service start
- > rcs-mongo-service stop
- > rcs-mongo-service restart

Restarting Collector service

Purpose

In the event of faults, Collector service can be restarted using this utility instead of using the Windows Service Management function.

Command

The commands to start, stop and restart the service are given below in order:
- > rcs-collector-service start
- > rcs-collector-service stop
- > rcs-collector-service restart

Restarting Worker service

Purpose

In the event of faults, Worker service can be restarted using this utility instead of using the Windows Service Management function.
Command

The commands to start, stop and restart the service are given below in order:

- > rcs-worker-service start
- > rcs-worker-service stop
- > rcs-worker-service restart

Restarting Network Injector service

⚠️ CAUTION: use SSH protocol for all installation, setup and data exchange operations to the remote unit.

Purpose

In the event of faults you can directly work on Network Injector and restart service.

Command

To restart the service, enter the following command:

# /etc/init.d/rcsniar restart

To stop the service, enter the following command:

# /etc/init.d/rcsniar stop

Restarting Anonymizer service

⚠️ CAUTION: use SSH protocol for all installation, setup and data exchange operations to the remote unit.

Purpose

In the event of faults signaled on RCS Console you can directly work on the VPS server and restart service.

Command

To restart the service, enter the following command:

# /etc/init.d/rcsanon restart

To stop the service, enter the following command:

# /etc/init.d/rcsanon stop

⚠️ IMPORTANT: command syntax refers to the Linux CentOS 6 operating system version.
Hardware component service procedures

Introduction
Typical hardware component service procedures to be used in the event of hardware faults are provided below.

Hardware key replacement.
If the main hardware key stops working, it must be immediately replaced with the backup key, contained in the supplied package. Contact support service for a license file compatible with the backup key.
Instructions on how to replace and activate a new key are given below:

<table>
<thead>
<tr>
<th>Phase</th>
<th>Who</th>
<th>Does what</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>the client</td>
<td>Informs HackingTeam of the fault.</td>
</tr>
<tr>
<td>2</td>
<td>HackingTeam</td>
<td>sends a new license file linked to the backup hardware key.</td>
</tr>
<tr>
<td>3</td>
<td>the client</td>
<td>replace the main key with the backup key and start the procedure to assign the new license file.</td>
</tr>
<tr>
<td>4</td>
<td>the client</td>
<td>sends the faulty key to HackingTeam.</td>
</tr>
<tr>
<td>5</td>
<td>HackingTeam</td>
<td>replace the faulty key with a new backup key and send it to the customer.</td>
</tr>
</tbody>
</table>

Master Node replacement
The recommended procedure is described below:

Step  Action
1    Restore a server, repeating all installation operations.  
See "RCS server installation in All-in-One architecture" on page 18 or "RCS server installation in distributed architecture" on page 22
2    Select the most recent backup (full or metadata). If the most recent backup is metadata, full backup can be restored later. In fact, the backup is not destructive and supplements the information it has with that present,  
See "What you should know about backup" on page 94

Shard replacement
The recommended procedure is described below:
Step | Action
--- | ---
1 | Repeat the entire installation procedure.  
   *See "RCS server installation in distributed architecture" on page 22*
2 | Restore the last full backup.  
   *See "Backup management" on page 91*

Replacing the Collector/Network Controller
Repeat the entire installation procedure.  
*See "RCS server installation in distributed architecture" on page 22*

Replacing an Anonymizer
Repeat the entire installation procedure.  
*See "Anonymizer installation and settings" on page 38*

Replacing a Network Injector Appliance
Repeat the entire installation procedure.  
*See "Network Injector Appliance installation" on page 42*

Replacing a Tactical Injector Appliance
Repeat the entire installation procedure.  
*See "Tactical Control Center installation" on page 47*
RCS Console for the System administrator

Presentation

System administrator’s role

The System Administrator’s role is to:
- complete installation with Anonymizer, Network Injector and Backup settings
- check Shard database space
- check Collector, Anonymizer, Network Injector and other system component operations
- update system components
- manage backup
- resolve any problems

Enabled functions

To complete his/her assigned activities, the System administrator has access to the following functions:
- System
- Monitor

Content

This section includes the following topics:

Starting the RCS Console ................................................................. 80
Homepage description ................................................................. 81
Wizards in the homepage ............................................................ 82
Shared interface elements and actions ......................................... 83
Front end management .............................................................. 87

System monitoring (Monitor) ......................................................... 98
System monitoring data (Monitor) ............................................... 100
Starting the RCS Console

When started, RCS Console asks you to enter your credentials previously set by the Administrator.

What the login page looks like
This is what the login page looks like:

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Title bar with command buttons: Close RCS Console. Expand window button. Shrink window button.</td>
</tr>
<tr>
<td>2</td>
<td>Login dialog window.</td>
</tr>
</tbody>
</table>

Open RCS Console
To open RCS Console functions:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In Username and Password, enter the credentials as assigned by the Administrator.</td>
</tr>
<tr>
<td>2</td>
<td>In Server, enter the name of the machine or server address to connect to.</td>
</tr>
</tbody>
</table>
**Step Action**

3 Click : the homepage appears with the menus enabled according to your account privileges. See "Homepage description" below.

**Homepage description**

To view the homepage: click

**Introduction**

The homepage is displayed when the RCS Console is started, and is the same for all users. Enabled menus depend on the privileges assigned to the account.

**What it looks like**

This is what the homepage looks like, with recently opened items saved. For details on shared elements and actions:

![Homepage Screenshot]

**Area Description**

1 Title bar with command buttons.
2 RCS menu with functions enabled for the user.
3 Search box to search operations, targets and agents, by name or description.
**Area** | **Description**
--- | ---
4 | Links to last five opened elements (operation, target and agent).
5 | Wizard buttons.
6 | Logged in user with possibility of changing the language and password.
7 | Download area with ability to view progress during export or compiling.
8 | Current date and time with possibility of changing the time zone.

**Wizards in the homepage**

*To view the homepage:* 
• click 

**Introduction**

For users with certain privileges, RCS Console displays buttons that run wizards.

**What it looks like**

This is how the homepage is displayed with enabled wizards:

![Image of the homepage with enabled wizards]

**Button** | **Function**
--- | ---
| Open the wizard to quickly create an agent.

**NOTE:** the button is only enabled for users with Administrator and Technician privileges.
### Button Function

**Open**
Open the wizard to quickly save operation and target data.

*NOTE:* the button is only enabled for users with Administrator and System Administrator privileges.

### Archive Wizard

This wizard lets you quickly manage open operation or target data to save and delete them from the database.

### Shared interface elements and actions

Each program page uses shared elements and allows similar actions to be run.

For easier manual comprehension, elements and actions shared by some functions are described in this chapter.

### What the RCS Console looks like

This is what a typical RCS Console page looks like. A target page is displayed in this example:
**Area** | **Description**
---|---
1 | Title bar with command buttons:  
   - Logout from RCS.  
   - Page refresh button.  
   - Expand window button.  
   - Shrink window button.  
2 | - Return to homepage button  
   - RCS menu with functions enabled for the user.  
3 | Operation scroll bar. Descriptions are provided below:  
   | **Icon** | **Description**  
   | 🕒 | Back to higher level.  
   | 📖 | Show the operation page.  
   | 🗝️ | Show the target page.  
   | 🏗️ | Show the factory page.  
   | ⚡ | Show the agent page.  
4 | Buttons to display all elements regardless of their group membership. Descriptions are provided below:  
   | **Icon** | **Description**  
   | 📖 | Show all operations.  
   | 🗝️ | Show all targets.  
   | ⚡ | Show all agents.  
5 | Window toolbar.  
6 | Search buttons and box:  
   | **Object** | **Description**  
   | 🔍 | Search box. Enter part of the name to display a list of elements that contain the entered letters.  
   | | Display elements in a table.  
   | | Display elements as icons.  
7 | Logged in user with possibility of changing the language and password.
**Area**  **Description**

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
</table>
| 8 | Download area with ability to view progress during export or compiling. Files are downloaded to the desktop in RCS Download folder.  
   |   - top bar: percent generation on server  
   |   - bottom bar: percent download from server to RCS Console. |
| 9 | Current date and time with possibility of changing the time zone. |

**Actions always available on the interface**

**Change interface language or password**
To change the interface language or password:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Click [6] to display a dialog window with the user’s data.</td>
</tr>
<tr>
<td>2</td>
<td>Change the language or password and click ⊳ to confirm and exit.</td>
</tr>
</tbody>
</table>

**Converting the RCS Console date-time to the actual time zone**
To convert all dates-times to the actual time zone:

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
</table>
| 1    | Click [8] to display a dialog window with the current date-time:  
   | UTC time: Greenwich mean time (GMT)  
   | Local time: date-time where the RCS server is installed  
   | Console time: date-time of the console used that can be converted. |
| 2    | Change the time zone and click ⊳ to confirm and exit: all displayed dates-times are converted as requested. |

**Table actions**
The RCS Console displays various data in tables. Tables let you:

- sort data by column in increasing/decreasing order
- filter data by column
### Action | Description
--- | ---
**Sort by column** | Click on the column heading to sort that column in increasing or decreasing order.

<table>
<thead>
<tr>
<th>Event</th>
<th>Path</th>
</tr>
</thead>
<tbody>
<tr>
<td>SYNC</td>
<td>Swordfish</td>
</tr>
<tr>
<td>INSTANCE</td>
<td>Swordfish &gt; J</td>
</tr>
<tr>
<td>EVIDENCE</td>
<td>*</td>
</tr>
</tbody>
</table>

**Filter a text** | Enter part of the text you are searching for: only elements that contain the entered text appear.

The example shows elements with descriptions like:

- "myboss"
- "bossanova"

**Filter based on an option** | Select an option: the elements that match the selected option appear.

**Filter based on several options** | Select one or more options: the elements that match all selected options appear.

**Change the column size** | Select the edge of the column and drag it.
Front end management

To manage the front end:

- System section, Frontend

Function scope
When RCS is running, this function lets you monitor the Anonymizers and Collectors, change the Anonymizer and chains settings and update the VPs.

During installation, this function lets you create a new Anonymizer "object" that acts as the logical connection between the RCS Console and the software component to be installed on a VPS.

What the function looks like
This is what the page looks like:

Area Description
1 RCS menu.
2 System menu.
### Area Description

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
</table>
| 3    | Window toolbar.  
Descriptions are provided below:  

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Create" /></td>
<td>Create a new Anonymizer.</td>
</tr>
</tbody>
</table>
| ![Edit](image) | Edit Anonymizer data.  
After editing, click **Apply settings**.  
Show last logs.  
Tip: double-click an Anonymizer to check/edit data. |
| ![Delete](image) | Delete an Anonymizer. This does not delete the Anonymizer installed on the VPS.  
It generates the installer for the first Anonymizer installation and saves it on the desktop. Copy the file via SSH to the remote VPS and run it. |
| ![Update](image) | Update the Anonymizer software version from remote.  
Simulate agent behavior. It connects to each Anonymizer in the chain up to the gateway Collector, and returns connection results. |
| ![Update Settings](image) | Update settings on all Anonymizers. This command is used after adding, deleting or changing the Anonymizer chain in use.  
It shows packets automatically created on the Collector by **Exploit, WAP Push and QR Code** vectors made available for the target device. Files that are no longer used can be deleted.  
**CAUTION:** deleting files too early could compromise infection by vectors.  
**NOTE:** any files manually copied to the folder do not appear. |
| 4    | Anonymizers set but not yet included in a chain. |
### Area Description

**5** Anonymizer chains on the system with the IP address of the last element. Possible conditions:
- : Anonymizer not in chain.
- : Anonymizer in chain and running.
- : Anonymizer not monitored by the Network Controller.
- : Anonymizer with faults.
- : Collector running.
- : Collector not running.

**6** RCS status bar.

---

**To learn more**

For interface element descriptions See "*Shared interface elements and actions*" on page 83.

To install, edit or cancel an Anonymizer see "*Anonymizer installation and settings*" on page 38.

---

**Adding an Anonymizer to the configuration**

To add an Anonymizer see "*Anonymizer installation and settings*" on page 38.

---

**Editing Anonymizer settings**

To edit Anonymizer settings see "*Anonymizer installation and settings*" on page 38.

---

**File Manager data**

Descriptions are provided below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time</td>
<td>Vector installation date-time on the device.</td>
</tr>
<tr>
<td>Name</td>
<td>File name created by the installer.</td>
</tr>
<tr>
<td>Factory</td>
<td>Factory that generated the installer.</td>
</tr>
<tr>
<td>Field</td>
<td>Description</td>
</tr>
<tr>
<td>-------</td>
<td>-------------</td>
</tr>
<tr>
<td>User</td>
<td>User who created the installer.</td>
</tr>
</tbody>
</table>

**Back end management**

*To manage back end:*  
- System section, Backend

**Function scope**

When RCS is running, this function lets you check database status and available disk space.

**What the function looks like**

This is what the page looks like:

![Diagram showing RCS menu and System menu]

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>RCS menu.</td>
</tr>
<tr>
<td>2</td>
<td>System menu.</td>
</tr>
</tbody>
</table>
**Area Description**

3  Window toolbar. Descriptions are provided below:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Zip Database Icon" /></td>
<td>Zip the database.</td>
</tr>
</tbody>
</table>

4  Shard database structures with their status, occupied and available disk space.

   **NOTE:** database 0 is the one included in MasterNode.

5  RCS status bar.

**To learn more**

For interface element descriptions see "*Shared interface elements and actions*" on page 83.

For further information on backups see "*What you should know about backup*" on page 94.

**Significant Shard database data**

Selected Shard database data is described below:

<table>
<thead>
<tr>
<th>Field</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Size</td>
<td>Occupied space.</td>
</tr>
<tr>
<td>On Disk</td>
<td>Total Shard device space.</td>
</tr>
<tr>
<td>&lt;servername&gt;:&lt;port&gt;</td>
<td>Shard server port</td>
</tr>
</tbody>
</table>

**Backup management**

*To manage backups:*  
- System section, Backup

**Function scope**

When RCS is running, this function lets you check the last backup status, create new backup processes or immediately run a backup process.

During RCS maintenance, this function lets you fix damaged data restoring them with a backup.

**What the function looks like**

This is what the page looks like:
Area | Description
---|---
1 | RCS menu. See "Shared interface elements and actions"
2 | System menu.
3 | Backup process toolbar. Descriptions are provided below:
   | **Icon** | **Description**
   | ![Add](image) | Add a backup process.
   | ![Edit](image) | Edit a backup process, for example, to disable it or change its frequency.
   | **IMPORTANT:** do not use this function to change the type of data processed. It is better to disable the process and create a new one with a matching name.
   | ![Delete](image) | Delete a backup process. Does not delete the backup files generated by the process.
   | ![Run](image) | Run backup even if disabled.
4 | List of programmed backup processes (enabled and non) with last backup status.
### Area Description

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>Backup toolbar. Descriptions are provided below:</td>
</tr>
</tbody>
</table>

#### Icon Description

- ![Refresh Icon](image)
  - Restore data from the selected backup file.
  - **CAUTION:** restoring data is a delicate operation. Make sure you have fully understood RCS’ restore mechanisms. See "What you should know about backup" on next page

- ![Delete Icon](image)
  - Deleting the backup file.

<table>
<thead>
<tr>
<th>6</th>
<th>List of completed backups.</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>RCS status bar.</td>
</tr>
</tbody>
</table>

See "Homepage description" on page 81

### Significant backup process data

The selected backup process data is described below:

#### Field Description

- **Enabled**
  - Enables/disables the backup process. Use to temporarily disable the process, for example, when replacing the backup device.
  - **Tip:** to quickly enable/disable a process, flag the box in the **En** column in the list.

- **What**
  - Data to be included in backup.
    - **metadata**: the entire system configuration: database, Collector, Network Injector, Anonymizer, agent. This is the bare minimum required to restore the system in the event of disaster. All information required to collect agent information is contained in this type of backup.
    - **full**: full backup of the system configuration and tapping data (operation and target). It may take a while to execute.
    - **operation**: backup of the indicated operation, data included.
    - **target**: backup of the indicated target, data included

- **When**
  - Backup frequency.
    - **UTC**: time zone.

- **Name**
  - Name to be assigned to the backup.
What you should know about backup

Management responsibilities
The System administrator must protect logged data and set frequency for the various types of backups.

Backup methods
RCS saves all data in databases in the specified folder when editing RCS settings. See "Editing Master Node settings" on page 66
A backup can save one or more types of data. Backup types are:
- metadata
- full
- operation
- target

Metadata type backup
The metadata backup type is fast and saves the entire system configuration, allowing normal system operations to be quickly restored in the event of problems. This type of backup does not include collected evidence. Daily backup is recommended.

WARNING: agents installed on various devices may be lost without a recent metadata backup.

NOTE: the job that runs weekly metadata backup is set by default and enabled whenever the system is rebooted. The default job cannot be deleted.

Full type backup
Full backup contains all evidence, therefore this could take a long time. Since it can be restored after a metadata backup, it is recommended once a month.

Operation type backup
The operation backup saves all open and closed operations. Since it can be restored after a metadata backup, it is recommended once a month.

Target type backup
The target backup saves all opened and closed target data. Since it can be restored after a metadata backup, it is recommended once a month.
**Incremental backup**

Full, operation and target backups can also be incremental. This way the system saves data generated from the date-time of the last backup. The first incremental backup is always complete (full, operation or target). Only subsequent backups are incremental.

ℹ️ NOTE: if the incremental option is removed and reapplied to a job, the next backup of that job will be complete.

Tip: name the job so it is later recognized as an incremental backup (i.e.: "Increm_lastWeek").

We suggest you run a complete backup (full, operation or target) once a month and an incremental backup once a week.

**Backup restore for severe reasons**

⚠️ **CAUTION:** restoring a backup should only be considered in severe situations such as replacing a database.

A backup must be restored whenever a server is replaced.

**Backup data restore**

ℹ️ **IMPORTANT:** backup restore is never destructive. For this reason, restore should not be used to restore accidentally changed elements.

Some examples are provided below:

<table>
<thead>
<tr>
<th>If after the last backup</th>
<th>Then restore</th>
</tr>
</thead>
<tbody>
<tr>
<td>an element was deleted</td>
<td>restores the deleted element.</td>
</tr>
<tr>
<td>an element was edited</td>
<td>leaves the element changed.</td>
</tr>
<tr>
<td>a new element was added</td>
<td>leaves the element changed.</td>
</tr>
</tbody>
</table>

⚠️ **IMPORTANT:** backup does not restore information on operations that were erroneously closed (deleted).

⚠️ **IMPORTANT:** to restore an incremental backup, restore them all starting with the oldest.

**Managing the Network Injector**

To manage Network Injectors:

- System section, Network Injector
Purpose
During installation, this function lets you create a new Network Injector "object" that creates the logical connection between the RCS Console and single hardware device.

What you can do
With this function you can:

- create a new Network Injector

What the function looks like
This is what the page looks like:

<table>
<thead>
<tr>
<th>Area</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>RCS menu.</td>
</tr>
<tr>
<td>2</td>
<td>System menu.</td>
</tr>
</tbody>
</table>
**Area Description**

**3** Network Injector toolbar. Descriptions are provided below:

<table>
<thead>
<tr>
<th>Action</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add a new Network Injector</td>
<td></td>
</tr>
<tr>
<td>Edit Network Injector data.</td>
<td></td>
</tr>
<tr>
<td>Delete the selected Network Injector.</td>
<td></td>
</tr>
</tbody>
</table>

**4** Network Injector list.

**5** Injection rule toolbar. Descriptions are provided below:

<table>
<thead>
<tr>
<th>Action</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Add a new rule.</td>
<td></td>
</tr>
<tr>
<td>Open the window with rule data.</td>
<td></td>
</tr>
<tr>
<td>Delete the selected rule.</td>
<td></td>
</tr>
<tr>
<td>Update the selected Network Injector’s settings.</td>
<td></td>
</tr>
</tbody>
</table>

**6** List of selected Network Injector rules

*En*: select to enable the rules to be applied.

**7** RCS status bar.

---

**To learn more**

For interface element descriptions See "*Shared interface elements and actions*" on page 83.

To learn more about Network Injector Appliance installation see "*Network Injector Appliance installation*" on page 42.

To learn more about Tactical Network Injector installation see "*Tactical Control Center installation*" on page 47 see "*Network Injector Appliance installation*" on page 42.

**Network Injector data**

Selected Network Injector data is described below:
Data Description

Name User's descriptions.

Description

Version Software version.
To view the software versions of all the components see "System monitoring (Monitor)" below.

Address Device IP address.

Port 4444. To view all ports to be opened on the firewall see "Ports to be opened on the firewall" on page 14.

Monitor via NC If enabled, Network Controller acquires the Network Injector status every 30 seconds.
If not enabled, Network Injector continues sniffing and injection operations, but the Network Controller does not check its status. Used when connections to Network Injector are down for any reason once installed at ISP, or for tactical use.

Log Last messages logged.

NOTE: Tactical Network Injector log updates depend on the frequency with which the operator enables synchronization.

To view log file content see "System logs" on page 71.

: update the list.

: delete viewed logs.

System monitoring (Monitor)

To monitor the system: Monitor section

Purpose
This function lets you:

- monitor system status in both hardware and software terms
- delete elements to be monitored since uninstalled
- monitor license used compared to those purchased
- define the alerting group and alert e-mail addressee in the event of system alarms

Service call: Contact your HackingTeam Account Manager if additional licenses are required.
What the function looks like
This is what the page looks like:

![Image of RCS 8.2 interface]

### Area  Description

1. **RCS menu.**
   - **Monitor 1:** indicates the current number of system alarms triggered.

2. **Window toolbar.** Descriptions are provided below:
   - **Icon  Description**
     - ![Delete] Deletes the component to be monitored.
     - ![Alert] Defines the alerting group.
     - ![License] Loads a new license file.

3. **List of RCS components and their status:**
   - ![Alarm] Alarm (generates an e-mail sent to the alerting group)
   - ![Warning]
   - ![Running] Component running

4. **License status.**
Area  Description

5  RCS status bar.

To learn more
For interface element descriptions See "Shared interface elements and actions" on page 83 . For a description of the data in this window see "System monitoring data (Monitor)" below .

Deleting a component to be monitored
To delete an uninstalled component:

Step  Action

1  Select the component.

2  Click Delete: RCS will no longer read the status of that component. Only subsequent installations of new components automatically updates the list.

   NOTE: erroneously deleting a component that is still installed is not destructive. Component status will reappear the next time the page is refreshed.

System monitoring data (Monitor)

System component monitoring data
System monitoring data is described below:

<table>
<thead>
<tr>
<th>Data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type</td>
<td>Monitored component type and name:</td>
</tr>
<tr>
<td>Name</td>
<td>Network Controller</td>
</tr>
<tr>
<td></td>
<td>Anonymizer</td>
</tr>
<tr>
<td></td>
<td>Database</td>
</tr>
<tr>
<td></td>
<td>Collector</td>
</tr>
</tbody>
</table>
## Data Description

<table>
<thead>
<tr>
<th>Data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>Component's IP address.</td>
</tr>
<tr>
<td>Last contact</td>
<td>Last synchronization date-time.</td>
</tr>
<tr>
<td>Status</td>
<td>Component status at last synchronization:</td>
</tr>
<tr>
<td></td>
<td><img src="https://via.placeholder.com/15" alt="Alarm" /> Alarm: the component is not running, contact the alerting group for immediate service.</td>
</tr>
<tr>
<td></td>
<td><img src="https://via.placeholder.com/15" alt="Warning" /> Warning: the component signals a risky situation, contact the system administrator for necessary checks.</td>
</tr>
<tr>
<td></td>
<td><img src="https://via.placeholder.com/15" alt="Checkmark" /> Component running.</td>
</tr>
<tr>
<td>CPU</td>
<td>% CPU use by the single process.</td>
</tr>
<tr>
<td>CPU Total</td>
<td>% CPU use by server.</td>
</tr>
<tr>
<td>Disk Free</td>
<td>% free disk space.</td>
</tr>
</tbody>
</table>

### License monitoring data

Licence monitoring data is described below: For restricted licenses, the format is "x/y" where x is the amount of licenses currently used by the system and y the maximum amount of licenses.

**CAUTION:** If all the licenses are in use, any new agents will be put in queue until a license is freed or new ones purchased.

<table>
<thead>
<tr>
<th>Data</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>License type</td>
<td>Type of license currently in use for agents.</td>
</tr>
<tr>
<td></td>
<td>reusable: an agent's license can be reused after it is uninstalled.</td>
</tr>
<tr>
<td></td>
<td>oneshot: an agent's license is only valid for one installation.</td>
</tr>
<tr>
<td>Users</td>
<td>Amount of users currently used by the system and maximum admitted quantity.</td>
</tr>
<tr>
<td>Agents</td>
<td>Amount of agents currently used by the system and maximum admitted quantity.</td>
</tr>
<tr>
<td>Desktop</td>
<td>Amount of desktop and mobile agents currently used by the system and maximum admitted quantities respectively.</td>
</tr>
<tr>
<td>Mobile</td>
<td></td>
</tr>
<tr>
<td>Distributed server</td>
<td>Amount of database currently used by the system and maximum admitted quantity.</td>
