Attack Vector Consultancy Service

ATTACK VECTOR CONSULTANCY SERVICE

Dear Customer,

As you know, HackingTeam is constantly looking for new and improved ways to support you during your activities.

We are pleased to inform you that we have implemented a new R&D team focused on supporting our customers in finding the most efficient attack vector for your investigation scenario.

This, in order to constantly support you during your day by day activities on the field, and prior to the investigation itself will take place.

One of the reasons of such change is related to the new scenarios you can find in the exploit market.

All the major software vendors are now paying a lot of focus in finding vulnerabilities of their products, patching them as soon as discovered.

This has led 0-day Exploits to have a very short life-cycle; as a consequence, 0-days can be hardly guaranteed for long periods and cannot be considered the only solution to deploy RCS into the target devices.

No matter the impossibility to foresee the future exploits availability, HackingTeam is strongly committed to providing its customers with the best attack vectors.

It means that you are entitled to access to an high value consultancy service with the possibility to use different vectors which includes 0-day exploits developed internally by HackingTeam during the maintenance contract period.

This new service is available on yearly basis and can be accessed at the cost of Euro 50.000,00 per year.

Other exploits purchased on the market will be quoted separately.

How to require the Attack Vector Service:

1. Send your scenario as a ticket to the support portal
2. HT will send you the exploit ready to be used
