Beyond Google: What to Do When Google (Bing and Yahoo) Do Not Answer Your Questions in a Useful Way

Presented by: Stephen Arnold, ArnoldIT

The purpose of this tutorial is to provide recommendations for specific online search tactics tailored to law enforcement and intelligence professionals. In this two hour session, Stephen E Arnold will walk through "how tos" for four specific cases/situations in which free open source online services can help handle the types of questions investigators and analysts often have in different languages.

Questions the presentation will address include:

- What are important tips to work around Google filters for general queries?
- When should Bing or Yahoo be used to dig more deeply into open source content?
- How does an investigator/analyst research content in language other than English?
- How does an investigator translate non-English content in real time and for free?
- What free tools are available to determine relationships among and between persons of interest?
- What free and open source information services provide current data about individuals and their activities?
- What free system displays relationships and telephone numbers in the Bing index?
- How can an investigator / analyst maximize time in a critical research task?

Seminar 4
