

Version 9.6 – Invisibility report

The results of the invisibility tests apply to the following infection vectors:

- silent installer;
- melted application;
- network injector INJECT-EXE attack;
- offline CD.

Please note:

- AV products were installed with default options in a **Windows 7 64-bit** environment.
- If you need information about a specific AV not listed, please contact us.

The table below details the results of the test.
