

Version 8.1.5 - Invisibility report

The Windows agent has been fully tested (static and runtime analysis) against 50+ antivirus products.

The tests were performed against the silent installer and melted applications. Reported invisibility results are valid for applications melted using the TNI.

Please note:

- AV products were installed and run with default options in a Windows 7 64-bit environment, unless specified otherwise.

For security reasons, we can not disclose the full test results.

If you need information about a specific AV not listed, please contact us.

The table below details the results of the test.
